
Pediatric Exam: Questions With Complete Solutions

A child's resting heart rate can be expected to be between 60 and 100 beats per minute once he reaches:

- 4 years of age.
- 6 years of age.
- 10 years of age.
- 12 years of age.

✓ Ans - 10 years of age.

Explanation:

Normal heart rate varies with age. Generally, as the heart becomes more efficient, the rate begins to decrease. This occurs with age. Four and six year-old children can be expected to have normal heart rates between 60 and 140 beats per minute. By age 10 years, the usual heart rate more closely approximates that of an adult, 60-100 beats per minute.

Which reflexes might a one month-old infant be expected to exhibit?

- Moro, stepping, rooting
- Stepping, rooting, tonic neck
- Babinski, Moro only
- Fencing, stepping, rooting

✓ Ans - Moro, stepping, rooting

Explanation:

A one month old infant would be expected to exhibit the Moro, stepping, rooting, and Babinski reflexes. The tonic neck, or "fencing" reflex isn't exhibited until about 2-3 months of age. This is assessed by lying the baby on his back and turning his head to one side. If the reflex is present, he should extend his arm on the side that his head is turned. The opposite arm assumes a flexed position. This pose mimics a fencer and thus, the name.

A sexually active adolescent male has a warty growth on the shaft of his penis. It is painless. This is likely:

- trichomonas.
- syphilis.
- herpes.

General Pediatrics Board Exam Questions
