

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1. Circles are females and squares are males.
- 2. A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of persons 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These people (1) had a color blind son (2). His dad is normal, his color blind mom, from his mother. Since the mother is not shaded she must be a carrier.

Number 3 is colorblind and his mother (4) is not shaded so he got his allele for colorblindness?

Yes, he got it from his mother. For colorblindness, from his mother. Must have been that 1's chromosomes. From their father.

Number numbers 11 and 12 were colorblind. How did they have a colorblind son (1)?

That mother (11) is a carrier for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color blind daughter, she would have to inherit the color blind allele from each parent. Her father must be X^N Y and mother would have to be X^N X^N.

If number 11 has a normal son, what is the probability that their son will be colorblind?

$X^N X^N \times X^N Y \rightarrow$ all of their sons will not be color blind.
