The Serpent's Lie Miguel A. Valemburn Jr., It started with a lie the fall of our ancestors The serpent said their eyes would be opened and they would be as gods but death came instead just as the Creator had warned Thousands of years later in the time we call Now human beings have forgotten their origin Our spirits beckon us to seek the truth and confront our past To do so we must time travel to the very beginning and discover the lie that shaped the reality we now know The Serpent's Lie was written for anyone who wants to better understand the Biblical book of Genesis It presents the accounts of Genesis in a thought provoking way showing how amazingly accurate the first book of the

Bible is both historically and scientifically This is a different kind of book that dares to challenge lies and misconceptions concerning our existence and what we call reality **Food Fight** McKay Jenkins, 2018-02-13 Are GMOs really that bad A prominent environmental journalist takes a fresh look at what they actually mean for our food system and for us In the past two decades GMOs have come to dominate the American diet Advocates hail them as the future of food an enhanced method of crop breeding that can help feed an ever increasing global population and adapt to a rapidly changing environment Critics meanwhile call for their banishment insisting GMOs were designed by overeager scientists and greedy corporations to bolster an industrial food system that forces us to rely on cheap unhealthy processed food so they can turn an easy profit In response health conscious brands such as Trader Joe's and Whole Foods have started boasting that they are GMO free and companies like Monsanto have become villains in the eyes of average consumers Where can we turn for the truth Are GMOs an astounding scientific breakthrough destined to end world hunger Or are they simply a way for giant companies to control a problematic food system Environmental writer McKay Jenkins traveled across the country to answer these questions and discovered that the GMO controversy is more complicated than meets the eye He interviewed dozens of people on all sides of the debate scientists hoping to engineer new crops that could provide nutrients to people in the developing world Hawaiian papaya farmers who credit GMOs with saving their livelihoods and local farmers in Maryland who are redefining what it means to be sustainable The result is a comprehensive nuanced examination of the state of our food system and a much needed guide for consumers to help them make more informed choices about what to eat for their next meal **DNA and**

carefully consider how to direct its power rather than let ourselves be shaped by it The Ethics of Invention makes a bold argument for a future in which societies work together in open democratic dialogue to debate not only the perils but even more the promises of technology
