content nearly all known kinds and some new kinds of mathematical cuneiform texts are represented in the collection. Therefore it has been possible to organize the present work as a broad general account of Mesopotamian mathematics illustrated mainly by texts from the Schøyen Collection but occasionally also by previously published texts. The general disposition of the book is borrowed from my own concise but comprehensive survey of Mesopotamian mathematics in the article on Mathematics in *Reallexikon der Assyriologie* vol 7 1990. My ambition has been to make the account easily accessible to all kinds of readers yet still as detailed and exhaustive as possible. For that purpose there is for instance an introductory Chapter 0 on how to get a better understanding of mathematical cuneiform texts. The chapter begins with a discussion of the danger of unintentional anachronisms in translations of pre-Greek mathematical texts and continues with a presentation of the kind of cuneiform transliterations, translations and interpretations true to the original that will be used throughout the book in discussions of individual texts.

**Philosophy before the Greeks** Marc Van De Mieroop, 2017-02-28

There is a growing recognition that philosophy isn't unique to the West; that it didn't begin only with the classical Greeks and that Greek philosophy was influenced by Near Eastern traditions. Yet even today there is a widespread assumption that what came before the Greeks was before philosophy. In *Philosophy before the Greeks* Marc Van De Mieroop, an acclaimed historian of the ancient Near East, presents a groundbreaking argument that for three millennia before the Greeks, one Near Eastern people had a rich and sophisticated tradition of philosophy fully worthy of the name. In the first century BC, the Greek historian Diodorus of Sicily praised the Babylonians for their devotion to philosophy. Showing the justice of Diodorus's comment, this is the first book to argue that there were Babylonian philosophers and that they studied knowledge systematically using a coherent system of logic rooted in the practices of cuneiform script. Van De Mieroop uncovers Babylonian approaches to knowledge in three areas: the study of language, which in its analysis of the written word formed the basis of all logic; the art of divination, which interpreted communications between gods and humans; and the rules of law, which confirmed that royal justice was founded on truth. The result is an innovative intellectual history of the ancient Near Eastern world during the many centuries in which Babylonian philosophers inspired scholars throughout the region until the first millennium BC, when the breakdown of this cosmopolitan system enabled others, including the Greeks, to develop alternative methods of philosophical reasoning.
