# “THE BEAKS OF FINCHES” LAB

## INTRODUCTION

Environmental conditions act as selecting agents because they select organisms with the most beneficial traits to become the parents of the next generation. Within a species, individuals with variations that make them better adapted to their environment will survive and reproduce in greater numbers than those without such adaptations. Observations have shown that the offspring of better-adapted individuals inherit many of their parents' favorable variations.

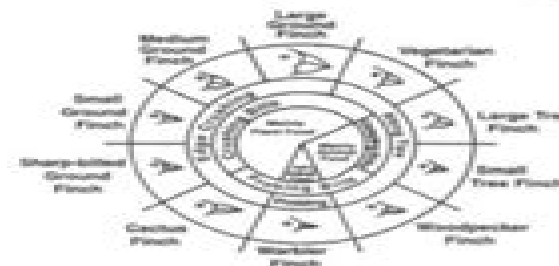

Finches are small birds found in many locations throughout the world. Charles Darwin used the numerous finch species found on the Galapagos Islands as evidence of natural selection. The great variety of beak adaptations present on the Galapagos is thought to be due to the isolation of bird populations on the islands with different kinds and amounts of food. Seed-eating finches exhibit a great number of differences in beak shapes and sizes. During ongoing competition for resources, some finches are successful and become more numerous, while less successful finches decrease in number.

In this laboratory activity, you will work with different tools that will serve to model finch “beaks”. The seeds provided represent finch food on a particular island. You will compete with other “finch” species to see which “beak” is best adapted for obtaining a specific food.

## HYPOTHESIS:

1. Examine the different tools (“beaks”) and seeds provided. Predict which “beak” will be the *most* successful at picking up small seeds. Give the reasons for your choice.

2. Predict which “beak” will be the *least* successful at picking up small seeds. Give the reasons for your choice.

## ROUND ONE: *No Competition, Original Island*

- When given the “Round One” signal, one member of your team should use the “beak” to pick up small seeds one at a time from the large dish and place them in the small dish. Repeat this for a total of four trials, two trials for each partner. A timekeeper will tell you when to start and stop each trial. Record your results in the “Round One: Feeding with No Competition” data table.

web may 4 2020 high power systems for high voltage low current or for low voltage high current there are switching regulator ics you can purchase that will include the regulator circuitry you need in this case you need to follow the same strategy for your layout and component selection as you would when working at low power

[a low voltage supply from which one needs high currents must](#) - Dec 29 2021

web solution verified by toppr by ohms law  $i = v / r$  now if the current required is high the voltage should be high and the resistance should be low hence a low voltage supply from which one needs high currents must have very low internal resistance solve any question of current electricity with

[high voltage low current dc power supply axiom test](#) - Jun 15 2023

web get a high voltage low current dc power supply quickly from us get back to your

[precision current measurements on high voltage power supply](#) - Oct 07 2022

web the requirement of monitoring high voltage power rails and interfacing with lower voltage components while being powered by a supply voltage as low as 1.7 v as shown in figure 3 in the event the system is placed into a shutdown or sleep state low voltage supplies powering the adcs microcontrollers and signal path amplifiers
