mathematics This sixth volume in the series begins with a homage to the architect Zaha Hadid who died on March 31st 2016 a few weeks before the opening of a large exhibition of her works in Palazzo Franchetti in Venice where all the Mathematics and Culture conferences have taken place in the last years A large section of the book is dedicated to literature narrative and mathematics including a contribution from Simon Singh It discusses the role of media in mathematics including museums of science journals and movies Mathematics and applications including blood circulation and preventing crimes using earthquakes is also addressed while a section on mathematics and art examines the role of math in design A large selection presents photos of mathematicians and mathematical objects by Vincent Moncorge Discussing all topics in a way that is rigorous but captivating detailed but full of evocations it offers an all embracing look at the world of mathematics and culture

General Relativistic Self-Similar Waves that Induce an Anomalous Acceleration into the Standard Model of Cosmology

Joel Smoller, Blake Temple, 2012 The authors prove that the Einstein equations for a spherically symmetric spacetime in Standard Schwarzschild Coordinates SSC close to form a system of three ordinary differential equations for a family of self similar expansion waves and the critical $k = 0$ Friedmann universe associated with the pure radiation phase of the Standard Model of Cosmology is embedded as a single point in this family Removing a scaling law and imposing regularity at the center they prove that the family reduces to an implicitly defined one parameter family of distinct spacetimes determined by the value of a new acceleration parameter a such that $a = 1$ corresponds to the Standard Model The authors prove that all of the self similar spacetimes in the family are distinct from the non critical $k \neq 0$ Friedmann spacetimes thereby characterizing the critical $k = 0$ Friedmann universe as the unique spacetime lying at the intersection of these two one parameter families They then present a mathematically rigorous analysis of solutions near the singular point at the center deriving the expansion of solutions up to fourth order in the fractional distance to the Hubble Length Finally they use these rigorous estimates to calculate the exact leading order quadratic and cubic corrections to the redshift vs luminosity relation for an observer at the center

Mathematical Methods for Curves and Surfaces Michael Floater, Tom

Lyche, Marie-Laurence Mazure, Knut Mørken, Larry L. Schumaker, 2014-02-03 This volume constitutes the thoroughly refereed post conference proceedings of the 8th International Conference on Mathematical Methods for Curves and Surfaces MMCS 2012 held in Oslo Norway in June July 2012 The 28 revised full papers presented were carefully reviewed and selected from 135 submissions The topics range from mathematical analysis of various methods to practical implementation on modern graphics processing units The papers reflect the newest developments in these fields and also point to the latest literature

Macdonald,2012-06-01 A complete and accessible explanation of the factors contributing to the onset of the 2007 financial and economic crisis The myriad factors are explained in an orderly way with simple terms The anticipation or not and reception of the crisis by mainstream economists and by Austrian economics leads to reflection on the state of economic theory Tracing

Technologies Helena Machado, Barbara Prainsack, 2016-02-24 The real heroes of television crime shows in the twenty first century are no longer police detectives but forensic technologies The immense popularity of high tech crime television shows has changed the way in which crime scene work is viewed The term CSI effect was coined to signify a situation where people's views and practices have been influenced by such media representations e.g. judges and jurors putting more weight on forensic evidence that has been produced with high tech tools in particular DNA evidence than on other kinds of evidence While considerable scholarly attention has been paid to examining the CSI effect on public jurors judges and police investigators prisoners' views on forensic technologies and policing have been under explored Drawing on a research sample of over 50 interviews carried out with prisoners in Portugal and Austria this groundbreaking book shows how prisoners view crime scene traces how they understand crime scene technologies and what effect they attribute to the existence of large police databases on their own lives careers and futures Through critically engaging with STS sociological and criminological perspectives on the use of DNA technologies within the criminal justice system this work provides the reader with valuable insights into the effect of different legal political discursive and historical configurations on how crime scene technologies are utilized by the police and related to by convicted offenders **Intelligent Computer Mathematics** Serge

After the Education Wars Andrea Gabor, 2018-06-12 The education wars have been demoralizing for teachers After the Education Wars helps us to see a better way forward Cathy N Davidson The New York Times Book Review After the Education Wars is an important book that points the way to genuine reform Diane Ravitch author of Reign of Error and The Death and Life of the Great American School System A bestselling business journalist critiques the top down approach of popular education reforms and profiles the unexpected success of schools embracing a nimbler more democratic entrepreneurialism In an entirely fresh take on school reform business journalist and bestselling author Andrea Gabor argues that Bill Gates Eli Broad and other leaders of the prevailing education reform movement have borrowed all the wrong lessons from the business world After the Education Wars explains how the market based measures and carrot and stick incentives

informing today's reforms are out of sync with the nurturing culture that good schools foster and contrary to popular belief at odds with the best practices of thriving twenty first century companies as well. These rich detailed stories of real reform in action illustrate how enduring change must be deeply collaborative and relentlessly focused on improvement from the grass roots up. Lessons also learned from both the open source software and quality movements. The good news is that solutions born of this philosophy are all around us. From Brockton Massachusetts where the state's once failing largest high school now sends most graduates to college to Leander Texas a large district where school improvement spurred by the ideas of quality guru W Edwards Deming has become a way of life. A welcome exception to the doom and gloom canon of education reform. After the Education Wars makes clear that what's needed is not more grand ideas but practical and informed ways to grow the best ones that are already transforming schools.
