for teaching a two term course Part I covers the balance equation in the context of diffusive transport momentum energy mass and charge Each chapter adds a term to the balance equation highlighting that term s effects on the physical behavior of the system and the underlying mathematical description Chapters familiarize students with modeling and developing mathematical expressions based on the analysis of a control volume the derivation of the governing differential equations and the solution to those equations with appropriate boundary conditions Part II builds on the diffusive transport balance equation by introducing convective transport terms focusing on partial rather than ordinary differential equations The text describes paring down the full microscopic equations governing the phenomena to simplify the models and develop engineering solutions and it introduces macroscopic versions of the balance equations for use where the microscopic approach is either too difficult to solve or would yield much more information that is actually required The text discusses the momentum Bernoulli energy and species continuity equations including a brief description of how these equations are applied to heat exchangers continuous contactors and chemical reactors The book introduces the three fundamental transport coefficients the friction factor the heat transfer coefficient and the mass transfer coefficient in the context of boundary layer theory Laminar flow situations are treated first followed by a discussion of turbulence The final chapter covers the basics of radiative heat transfer including concepts such as blackbodies graybodies radiation shields and enclosures

Recursive Macroeconomic Theory, fourth edition Lars Ljungqvist, Thomas J. Sargent, 2018-09-11 The substantially revised fourth edition of a widely used text offering both an introduction to recursive methods and advanced material mixing tools and sample applications Recursive methods provide powerful ways to pose and solve problems in dynamic macroeconomics Recursive Macroeconomic Theory offers both an introduction to recursive methods and more advanced material Only practice in solving diverse problems fully conveys the advantages of the recursive approach so the book provides many applications This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models Other chapters have been extended and refined For example there is new material on heterogeneous beliefs in both complete and incomplete markets models and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models The book is suitable for first and second year graduate courses in macroeconomics Most chapters conclude with exercises many exercises and examples use Matlab or Python computer programming languages
