The Oxford Handbook of Productivity Analysis Emili Grifell-Tatjé, C.A. Knox Lovell, Robin C. Sickles, 2018-08-07 Productivity underpins business success and national well being and thus it is crucial to understand the factors that influence productivity growth This volume provides a comprehensive exploration into the significance of productivity growth for business the economy and for social economic progress It examines how productivity is defined measured and implemented It also surveys the dispersion of productivity across time and place focusing on the productivity dynamics that either leads to a reallocation of resources that reduces dispersion and increases aggregate productivity or conversely allows dispersion to persist behind barriers to productivity enhancing reallocation A third focus is an investigation of the drivers of or impediments to productivity growth some of which are organizational in nature and under management control and others of which are institutional in nature and subject to public policy intervention The Oxford Handbook of Productivity Analysis contains contributions of distinguished productivity experts from around the world who analyze a wide range of timely issues These issues concern purely analytical topics surrounding the measurement of productivity in various situations beginning with the ideal situation in which all inputs and all outputs and their prices are observed accurately They also include service sectors such as education in which the services provided are hard to define much less measure and other sectors that generate undesirable environmental externalities that are difficult to price and complicate the very definition of productivity The issues also involve business management topics ranging from the role of business models and benchmarking to the quality of management practices the adoption of new technologies and possible complementarities between the two The relationship between productivity and business performance is also explored At a more aggregate level the issues range from the impacts of market power incentive regulation international trade and global value chains on productivity to the contribution of productivity to economic development and economic welfare

Technen: Elements of Recent History of Information Technologies with Epistemological Conclusions Andrzej Piotr Wierzbicki, 2014-07-25 The book expresses the conviction that the art of creating tools Greek techne changes its character together with the change of civilization epochs and co determines such changes This does not mean that tools typical for a civilization epoch determine it completely but they change our way of perceiving and interpreting the world There might have been many such epochs in the history of human civilization much more than the three waves of agricultural industrial and information civilization This is expressed by the title Technen of the book where n denotes a subsequent civilization epoch During last fifty years we observed a decomposition of the old episteme understood as a way of creating and interpreting knowledge characteristic for a given civilization epoch of modernism which was an episteme typical for industrial civilization Today the world is differently understood by the representatives of three different cultural spheres of strict and natural sciences of human and social sciences especially by their part inclined towards postmodernism and technical sciences that have a different episteme than even that of strict and natural sciences Thus we observe today not two cultures but three different episteme The book consists of four parts First contains basic epistemological observations second is devoted to selected elements of recent history of information technologies third contains more detailed epistemological and general discussions fourth specifies conclusions The book is written from the cognitive perspective of technical sciences with a full awareness and discussion of its differences from the cognitive perspective of strict sciences or human and social sciences The main thesis of the book is that informational revolution will probably lead to a formation of a new episteme The book includes discussions of many issues related to such general perspective such as what is technology proper what is intuition from a perspective of technology and of evolutionary naturalism what are the reasons for and how large are the delays between a fundamental invention and its broad social utilization what is the fundamental logical error using paradoxes that are not real only apparent of the tradition of sceptical philosophy what are rational foundations and examples of emergence of order out of chaos whether civilization development based on two positive feedbacks between science technology and the market might lead inevitably to a self destruction of human civilization etc
