theme for an IUTAM Symposium Progress in this field requires close interaction between researchers in several disciplines This is reflected in the topics covered The topics of the different sessions were o Calculations of Temperatures Strains and Stresses o Residual Stresses and Residual Deformations o Measurements of Residual Strains and Stresses o Effects of Defects and Residual Stresses on Fracture and Fatigue o Effects of Residual Stresses on Creep Deformation o Effects of Residual Deformations and Residual Stresses on Buckling There were 50 participants from 12 countries at the Symposium The 28 papers presented at the Symposium are collected in this volume A Scientific Committee appointed by the Bureau of IUTAM selected the participants to be invited and the papers to be presented **Monthly Catalogue, United States**

is employed for the post buckling analysis of two and three dimensional structures Chapter 5 addresses the non linear behaviour and modelling of semi rigid connections while several numerical functions for description of moment versus rotation curves of typical connection types are introduced The scope of the work in chapter 6 covers semi rigid connections and material yielding to the static analysis of steel frames Chapter 7 studies the cyclic response of steel frames with semi rigid joints and elastic material characteristics In the last chapter the combined effects of semi rigid connections and plastic hinges on steel frames under time dependent loads are studied using a simple springs in series model For computational effectiveness and efficiency the concentrated plastic hinge concept is used throughout these studies
