Question 8 (after all the Christmas)

Question: Following the Christmas shopping, the students returned to the laboratory and performed the following:

Experiment: cell membrane permeability, diffusion, osmosis, equilibrium, osmotic, semi-permeable membrane, water, solvent.

Practical knowledge questions (the teacher didn't ask any more questions):

1. Negative pressure (suction) is used instead of water because of safety issues. How does this work from the inside? Explain why it works.

It works by using water and not other water. The suction is not a vacuum it is negative pressure and water goes from high to low pressure. The water goes from the water bag to the container.

2. Whether you think about it, you can think of the water going into the cell and out.

The water goes in because the water is not in equilibrium.

Practical knowledge:

A **cell membrane** is a thin layer that separates the cell from the outside world. It is a **selective permeable membrane**, which means that some things can pass through it, but others cannot.
