Osterkamp,A.D. Howard,2012-12-02 Biogeomorphology a relatively new term refers to relations between the biota and geomorphic form and process Ecology is the study of organisms in relation to their physical and biotic environment Thus ecogeomorphology could have been an equally acceptable name for this publication which stresses the ecological aspects of

the larger field of biology Most of the articles relate vegetation to fluvial geomorphology erosion and sedimentation However articles showing the significance of animal ecological studies and their bearing on geomorphic form and process are also included Geographically the papers range from arid areas in the American Southwest and Israel to the new world tropics Most articles however are concerned with temperate areas of North America and Western Europe This is among the first books to approach the role that biota and ecology play in geomorphic processes and should be on the shelf of every landscape ecologist

Geomorphological Fieldwork ,2014-12-06 Geomorphological Fieldwork addresses a topic that always remains popular within the geosciences and environmental science More specifically the volume conveys a growing legacy of field based learning for young geomorphologists that can be used as a student book for field based university courses and postgraduate research requiring fieldwork or field schools The editors have much experience of field based learning within geomorphology and extend this to physical geography The topics covered are relevant to basic geomorphology as well as applied approaches in environmental and cultural geomorphology The book integrates a physical human approach to geography but focuses on physical geography and geomorphology from an integrated field based geoscience perspective Addresses fluvial and karst landscapes in depth Focuses on field based learning as well as educational geomorphology Conveys experiential knowledge in international contexts

The Dictionary of Physical Geography David S. G. Thomas,2016-02-23 This fully revised comprehensive fourth edition covers the whole field of physical geography including climate and atmosphere geomorphology biogeography hydrology oceans Quaternary environmental change soils remote sensing and GIS This new edition reflects developments in the discipline during the last decade with the expert advisory group providing an international perspective on the discipline of physical geography Over 2000 entries that are self contained or cross referenced include 200 that are new to this edition over 400 that are rewritten and updated and new supporting references and additional recommended reading in many others Entries removed from the last edition are available in the online resource This volume is the essential reference point for students of physical geography and related environmental disciplines lecturers and interested individuals alike

Groundwater in Ethiopia Seifu Kebede,2012-08-01 This book provides a comprehensive description of groundwater resources in Ethiopia and its various dimensions groundwater as resource environmental functions and socioeconomics The prevailing knowledge of groundwater resources in Ethiopia or elsewhere in Sub Saharan Africa was based on geological and stratigraphic framework known nearly four decades ago mainly 1960 s and 70 s Thanks to the substantial geoscientific research since the 70 s a new set of relevant geological stratigraphic data has been created that helps to re define our understanding of groundwater resources in Africa as a whole and in Ethiopia in particular a For the first time the basement aquifer of Ethiopia has been described hydrogeologically based on genesis of regoliths deep weathering and striping history clear regional difference in

groundwater potential is shown for the first time comparative accounty has been given regarding groundwater occurrence in the generally low grade basement rocks of Ethiopia Arabian Nubian shield and high grade basement rocks of the rest of Africa b For the first time groundwater occurrence in multilayred sedimentary rocks account for spatial variation in degree of karstification deformation history and stratigraphy c The vast volcanic aquifers of Ethiopia which have previously classified based on their ages are now reclassified based on age morphology eg groundwater in plateau volcanics groundwater in shield volcanics and aquifer structure d The loose alluvio lacustrine sediments which were known as least extensive in previous works based on areal cover are in fact shown to host the most voluminous groundwater resources in Ethiopia These aquifers have now been described based on their geomorphology extent and genesis The aim of this book is to use these newly created knowledge to redefine the understanding of groundwater resources in Ethiopia *Geomorphological Processes* E. Derbyshire,2019-03-13 This book originated from a proposal by one author J R H who was subsequently joined by a second E D and then by a third K J G It has taken longer to produce than we expected because of the complications imposed by the distances which the authors have succeeded in putting between themselves during the past three years The basic objective was to produce a short book which would introduce geomorphological processes to students in the first or second year of their higher education courses We believed that there was a need for such a book reviewing a range of geomorphological processes which would offer a prelude to the symphonies which are available in books devoted to specific processes and their effects many of which are sign posted in the lists of further reading at the end of each chapter We are aware that the range of suitable preludes is wide but we have endeavoured to compose one which expresses at least some of the recent achieve ments in the study of geomorphological processes Emphasis is placed on the nature of processes and upon their controls but the effects of processes in creating landforms are not reviewed in any detail In addition to the selected references at the end of each chapter we have collected a bibliography of works cited at the end of the book but this is not intended to be as exhaustive as the references collated in more advanced works *Global Blue Economy* Md. Nazrul Islam,Steven M. Bartell,2022-11-28 A global blue economy is an economic arena that depends on the benefits and values realized from the coastal and marine environments This book explains the sustainable blue economy as a marine based economy that provides social and economic benefits for current and future generations It restores protects and maintains the diversity productivity and resilience of marine ecosystems and is based on clean technologies renewable energy and circular material flows *From Practice to Praxis: A reflexive turn* Susan Groundwater-Smith,2016-11-10 From Practice to Praxis is an exploration of the development of ethical practice as it applies to the meaning of quality within the tradition of practitioner inquiry and participatory research Chronicling some of her most important works this is a compelling overview of Susan Groundwater Smith s contribution to the evolution of the nexus between thinking and theory as it stands between the academy and the field It traces the steps between instrumental reasoning towards a more liberatory and challenging

stance The book selects from a number of publications each representing the genesis of the nascent ideas that have informed Susan s practice as a scholar and researcher Taking a praxis stance draws attention not only to procedural concerns how things are done but also substantive issues that are associated with different forms of dialogue and trustworthiness why things are done In addition to the assemblage of articles and chapters the book is prefaced by a long essay that reveals those features of the writer s self understanding as it is illuminated throughout the selection The work is situated within a professional life history as well as relating to extant writings on theory and practice within a complex cultural and ever changing professional educational environment From Practice to Praxis will appeal to initial teacher education students in both primary and secondary settings as well as post graduate students with an interest in action research participant research with both practitioners in the field and young people

Base-level Impact Dan Bowman,2023-05-11 Much of the final shaping of the global landscape is accomplished by incision of river networks The base level is a principle determinate controlling the global relief by processes of erosion and aggradation In the populated world entrenchments triggered by base level changes may become devastating events damaging agricultural lands undercutting bridges and destroying roads The aim of this book as a chapter in fluviomorphology is to present the base level control when active in the continental interior unrelated to marine base level fluctuations along the continental margins nor to sequence stratigraphic tract models in Exxon sequence stratigraphic sense The focus is on the morphology and the gross trends of the

processes controlling channel evolution through transient signals initiated by base level changes and communicated upstream through the drainage network The book brings together principles and conclusions gained by field work by laboratory studies and by models based on the widely scattered literature The chapters include presentation of different types of base levels discussing the constraints of their altitude the degradation and aggradation responses the temporal and spatial trends along the channel network the controlling factors the knickpoint transient retreat process and its rates Special emphasis is given to the Dead Sea Rift following its extreme base level conditions which make it a unique field laboratory This book is relevant to students in earth sciences as well as to planners hydrologists and engineers dealing with geomorphology and surface drainage **Geological Survey Professional Paper** ,1982 *River Flow 2004* Massimo Greco,Armando Carravetta,Renata Della Morte,2004-06-15 RiverFlow 2004 is the Second International Conference on Fluvial Hydraulics organized as speciality conferences under the auspices of the International Association of Hydraulic Engineering and Research IAHR within its Fluvial Hydraulics and Eco Hydraulics Sections RiverFlow conferences are a significant forum of discussion for many researchers
