CHAPTER 2

The CAD Technician's Role in Office Practice and Procedure

TEST SOLUTIONS

- 2.1** Statement of the problem, mathematical solution, and solution to be placed on the drawing.
- 2.2** Using the Construction Specifications Institute *MasterFormat*.
- 2.3** The four national building codes are *IBC*, *BCCI*, *BOCA*, and *SBC*.
- 2.4** Small details and notes should be placed on the right side of the drawing sheet when possible so that they are not lost in the binding and they are easily seen when skimming through the drawings.
- 2.5** Details should be labeled with a title that describes the general intent of the detail, along with the scale used to create the drawings, a detail number, and the number of the page showing the detail.
- 2.6** Details are often placed in boxes to add clarity to the page. Several details relating to the same component should be placed in the order in which they will appear in the assembled component.
- 2.7** Placing all of the required drawings in a logical order based on NCS recommendations, assigning page and detail references, and then placing detail references in every occurrence of the detail.

General Construction Technology Manual:

Manual of Construction Project Management Jüri Sutt, 2011-05-09 This construction client's manual is written in the form of a list of activities. It supports owners in the role of client by helping them make choices during the project development process. This increases control over cost, quality, and duration at each stage. Activities within each main stage of the project development: preparation stage, procurement, design, preparation for construction, construction itself, handover, implementation, are divided into phases, each requiring separate decision making. The phase begins with a list of direct previous decisions and continues with a list of executors, the goal of the present phase, and a list of activities to be performed. And each phase ends with a list of expected results and a list of activities that these results release for action in the next phase. The sequence of these seven stages can be altered to help building owners manage risk by choosing and combining the timing of these stages. The tasks involved in project preparation described in the first chapter are, for example, often left by the owner for the designers to solve or sometimes even the contractors. The decisions relating to the choice of procurement schemes described in the second chapter can be made either at the preparation stage of project development as part of the prioritisation of aims or at the time of choosing the designer or at the stage of choosing construction contractors. Manual of Construction Project Management for owners/clients is for prospective owners who either operate as clients themselves or who use the services of professional construction management companies. The aim is to help both owners and their construction partners understand what to expect from each other. The manual describes activities at the level of detail required to choose the management task or method to make the decision. It is not bound to regulations of any specific country, and a detailed glossary makes it an indispensable worldwide reference. Civil Technology United States.
