and much more Designing and Teaching the Secondary Science Methods Course Aaron J. Sickel, Stephen B. Witzig, 2017-04-13 The improvement of science education is a common goal worldwide. Countries not only seek to increase the number of individuals pursuing careers in science but to improve scientific literacy among the general population. As the teacher is one of the greatest influences on student learning, a focus on the preparation of science teachers is essential in achieving these outcomes. A critical component of science teacher education is the methods course where pedagogy and content coalesce. It is here that future science teachers begin to focus simultaneously on the knowledge, dispositions, and skills for teaching secondary science in meaningful and effective ways. This book provides a comparison of secondary science methods courses from teacher education programs all over the world. Each chapter provides detailed descriptions of the national context, course design, teaching strategies, and assessments used within a particular science methods course and is written by teacher educators who actively research science teacher education. The final chapter provides a synthesis of common themes and unique features across contexts and offers directions for future research on science methods courses. This book offers a unique combination of behind-the-scenes thinking for secondary science methods course designs along with practical teaching and assessment strategies and will be a useful resource for teacher educators in a variety of international contexts.

Connecting Self-regulated Learning and Performance with Instruction Across High School Content Areas Maria K. DiBenedetto, 2018-07-23 This book shows how principles of self-regulated learning are being implemented in secondary classrooms. The 14 chapters are theoretically driven and supported by empirical research and address all common high school content areas. The book comprises 29 lesson plans in English language arts, natural and physical sciences, social studies, mathematics, foreign language, art, music, health, and physical education. Additionally, the chapters address students with special needs, technology, and homework. Each chapter begins with one or more lesson plans written by master teachers, followed by narratives explaining how the lesson plans were implemented. The chapters conclude with an analysis written by expert researchers of the self-regulated learning elements in the lessons. Each lesson and each analysis incorporate relevant educational standards for that area. Different types of high schools in several states serve as venues. This powerful new book, edited by Maria K. DiBenedetto, provides a unique and invaluable resource for both secondary teachers and researchers committed to supporting adolescents in the development of academic self-regulation. Each chapter is jointly written by teachers who provide a wealth of materials, including lesson plans, and researchers who situate these lesson plans and academic self-regulation goals within the larger work on self-regulation. The topics covered are far broader than any other book I have seen in terms of developing academic self-regulation, covering over a dozen content areas, including literacy, mathematics, social studies, the sciences, and the arts. Teachers and scholars alike will find this book a must-read. Karen Harris, EdD, Arizona State University. A practical and magnificent blend of educational research and application. This book goes beyond presenting the findings of research on self-regulation by connecting detailed strategies that align with the standards.

to the research DiBenedetto et al clearly illustrate how to develop self regulated learners in the classroom A refreshing must read for all secondary educators and educational researchers seeking to be well grounded in education research and practical application techniques Heather Brookman PhD Fusion Academy Park Avenue Self regulated learning is a research based process by which teachers help students realize their own role in the learning process Connecting Self Regulated Learning and Performance with Instruction Across High School Content Areas consists of model teachers lessons and analyses by prominent educational psychologists in the field of self regulated learning The book provides teachers with the tools needed to increase students awareness of learning and inspires all educators to use self regulated learning to promote engagement motivation and achievement in their students The book also provides administrators with the principles needed to infuse evidenced based self regulated learning into their curriculum and instruction I highly recommend the book Marty Richburg Northside High School
