Scalar: A quantity that can be described by a single number. It has magnitude but no direction. Examples: mass, temperature, time, speed.

Vector: A quantity that has both magnitude and direction. It is represented by an arrow. Examples: displacement, velocity, acceleration, force.

Modern Chemistry Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2001 **Deleuze and the Immanent Sublime** Louis Schreel, 2024-06-13 What becomes of the sublime today in a philosophy that discards the old oppositions between body and mind and embeds human reason in the creative evolution of life In this book Louis Schreel shows how Gilles Deleuze's life long engagement with the Kantian sublime grappled with just this question Its core argument centres on Deleuze's understanding of the sublime in terms of psychic individuation a creative self organizing process that animates cognitive systems from within Exploring Deleuze's transcendental philosophy through central concepts of self organization psychic individuation passibility and infinity this book shows how a new notion of the sublime emerges in a timely and novel way In this way Deleuze and the Immanent Sublime opens up an innovative perspective on transcendental philosophy shedding new light on Deleuze's transcendental empiricism both in relation to Kant and to contemporary cognitive science Engagement with previously untranslated writings from thinkers including Jean Petitot Gilbert Simondon Henri Maldiney and Erwin Straus adds further breadth to the development of Deleuze's ideas on the sublime in this systematic study

Functional Theory Shubin Liu,2022-04-13 Conceptual Density Functional Theory A unique resource that combines experimental and theoretical qualitative computing methods for a new foundation of chemical reactivity This two volume reference book shows how conceptual density functional theory can reconcile empirical observations within silico calculations using density functional theory molecular orbital theory and valence bond theory The ability to predict properties like electronegativity acidity basicity strong covalent and weak intermolecular interactions as well as chemical reactivity makes DFT directly applicable to almost all problems in applied chemistry from synthetic chemistry to catalyst design and materials characterization Edited by one of the most recognized experts in the field and contributed to by a panel of international experts the work addresses topics such as Qualitative methods that are capable of rationalizing chemical concepts derived from theory and computation Fundamental concepts like the computation of chemical bonding weak interactions and reactivity Computational approaches for chemical concepts in excited states extended systems and time dependent processes Theoretical chemists and physicists as well as those applying theoretical calculations to empirical problems will be able to use this book to gain unique insight into how theory intersects with experimental data in the field of qualitative computation **Mathematical Reviews** ,1998 **Innovation in Healthy and Functional Foods** Dilip

Ghosh,Shantanu Das,Debasis Bagchi,R.B. Smarta,2016-04-19 The focus of food science and technology has shifted from previous goals of improving food safety and enhancing food taste toward providing healthy and functional foods Today s consumers desire foods that go beyond basic nutrition foods capable of promoting better health or even playing a disease prevention role To meet this need for innovation **Connecting Literature and Science** Jay A. Labinger,2021-11-18 This book presents a case for engagement between the sciences and the humanities The author a professional chemist seeks to demonstrate that the connections between those fields of intellectual activity are far more significant than anything that separates them The book combines a historical survey of the relationships between science and literature with a number of case studies that examine specific scientific episodes several drawn from the author s own research juxtaposed with a variety of literary works spanning a wide range of period and genre Dante to detective fiction War and Peace to White Teeth to elicit their common themes The work argues for an empirical non theory based approach one that is closely analogous to connectionist models of brain development and function and that can appeal to general readers as well as to literary scholars and practicing scientists who are open to the idea that literature and science should not be compartmentalized
