Electrical Power Systems Technology Stephen W. Fardo, Dale R. Patrick, 1985. Electrical Machines and Power Systems is a technical school or A Level text using a systematic method to provide an overview of electrical machine and power system operation in one easy to understand reference. In *Electrical Power Systems Technology* key concepts are presented using a big picture approach. Real world applications, procedures and operations are stressed throughout the five major units of the book. A block diagram of the electrical power system model used for the unit organization of the book is a new approach to teaching this content. Mathematical presentations are simplified and problems are solved by basic applications. The textbook is divided into five major units of study: 1 Power Measurement, 2 Power Production, 3 Power Distribution, 4 Power Conversion, 5 Power Control. The units contain educational objectives which will be attained by the user of the text. Each unit is organized in chapter format with each chapter containing an introductory section, the main text and study problems, questions at the end. Line drawings and industrial photographs are used to give the text a more real world look. This textbook will make learning about electrical machines and power systems relevant. Complete overview of electrical power systems. Over 350 illustrations. Approximately 100 classroom laboratory activities. **Joint Source-Channel Decoding** Pierre Duhamel, Michel Kieffer, 2009-11-26. Treats joint source and channel decoding in an integrated way. Gives a clear description of the problems in the field together with the mathematical tools for their solution. Contains many detailed examples useful for practical applications of the theory to video broadcasting over mobile and wireless networks. Traditionally, cross layer and joint source channel coding were seen as incompatible with classically structured networks, but recent advances in theory changed this situation. Joint source channel decoding is now seen as a viable alternative to separate decoding of source and channel codes if the protocol layers are taken into account. A joint source protocol channel approach is thus addressed in this book. All levels of the protocol stack are considered, showing how the information in each layer influences the others. This book provides the tools to show how cross layer and joint source channel coding and decoding are now compatible with present day mobile and wireless networks with a particular application to the key area of video transmission to mobiles. Typical

applications are broadcasting or point to point delivery of multimedia contents which are very timely in the context of the current development of mobile services such as audio MPEG4 AAC or video H263 H264 transmission using recent wireless transmission standards DVH H DVB SH WiMAX LTE This cross disciplinary book is ideal for graduate students researchers and more generally professionals working either in signal processing for communications or in networking applications interested in reliable multimedia transmission This book is also of interest to people involved in cross layer optimization of mobile networks Its content may provide them with other points of view on their optimization problem enlarging the set of tools which they could use Pierre Duhamel is director of research at CNRS LSS and has previously held research positions at Thomson CSF CNET and ENST where he was head of the Signal and Image Processing Department He has served as chairman of the DSP committee and associate Editor of the IEEE Transactions on Signal Processing and Signal Processing Letters as well as acting as a co chair at MMSP and ICASSP conferences He was awarded the Grand Prix France Telecom by the French Science Academy in 2000 He is co author of more than 80 papers in international journals 250 conference proceedings and 28 patents Michel Kieffer is an assistant professor in signal processing for communications at the Universit Paris Sud and a researcher at the Laboratoire des Signaux et Syst mes Gif sur Yvette France His research interests are in joint source channel coding and decoding techniques for the reliable transmission of multimedia contents He serves as associate editor of Signal Processing Elsevier He is co author of more than 90 contributions to journals conference proceedings and book chapters Treats joint source and channel decoding in an integrated way Gives a clear description of the problems in the field together with the mathematical tools for their solution Contains many detailed examples useful for practical applications of the theory to video broadcasting over mobile and wireless networks
