to outdated values in scholarship. Notions of discipline are critiqued as reflecting social power and representing the worldview of dominant social groups. By addressing and challenging such claims, this edited collection argues that proclamations of the death of disciplines have been greatly overstated. Not only are the notions of disciplinarity still important for understanding how we come to know the world, but this volume demonstrates how significant disciplinarity is to understanding different forms of knowledge if we wish to improve the building of knowledge and educational practice. Using analytical tools from systemic functional linguistics theory and social realist sociology, this volume illustrates how different disciplines can collaborate and cross-fertilize successfully without losing their distinctive insights and disciplinary integrity. The subsequent theory developed will thereby extend both linguistic and sociological approaches to the topic and make a major contribution to educational theory.

Each of the four sections in the book opens with an overview of one of the perspectives written by a leading scholar in the field and is then followed by three empirical studies which focus on specific aspects of CLIL seen from this perspective. Topics covered include motivation, the use of tasks, pragmatic development, speech functions in spoken interaction, the use of evaluative language in expressing content knowledge in writing, multimodal interaction, assessment for learning, L1 use in the classroom, English medium instruction in universities and CLIL teachers' professional identities.
