Extensions of Logic Programming

Peter Schroeder-Heister, 1991-02-12 This volume contains finalized versions of papers presented at an international workshop on extensions of logic programming held at the Seminar for Natural Language Systems at the University of Tübingen in December 1989 Several recent extensions of definite Horn clause programming especially those with a proof theoretic background have much in common One common thread is a new emphasis on hypothetical reasoning which is typically inspired by Gentzen style sequent or natural deduction systems This is not only of theoretical significance but also bears upon computational issues It was one purpose of the workshop to bring some of these recent developments together The volume covers topics such as the languages Lambda Prolog N Prolog and GCLA the relationship between logic programming and functional programming and the relationship between extensions of logic programming and automated theorem proving It contains the results of the first conference concentrating on proof theoretic approaches to logic programming

The Method of Socratic Proofs Dorota Leszczyńska-Jasion, 2025-06-13 This book contains a systematic and formal attempt to model solutions to problems such as Is it possible to prove a question Is it possible to prove something by the use of questions Do the existing paradigms in the logic of questions allow one to combine questions and proofs What are the results in this field In developing answers the book focuses on the applications of the method of Socratic proofs and goes beyond that It starts out with an overview of the leading paradigms issues problems and ready solutions in the logic of questions and places Inferential Erotetic Logic and the method of Socratic proofs against a wider background It then introduces these two methods in more detail and explains how they can be used for classical logic intuitionistic propositional logic and for basic modal logics Next the book deals with issues specific to the field of the logic of questions introducing the tools of Minimal Erotetic Semantics MiES The final chapters describe the translations between proof systems from a Socratic transformation derived in an erotetic calculus into a sequent system

Proof, Language, and Interaction Robin Milner, 2000

This collection of essays reflects the breadth of research in computer science Following a biography of Robin Milner it contains sections on semantic foundations programming logic programming languages concurrency and mobility On the Logic and Learning of Language Sean A. Fulop,2004-10-14 This book presents the author s research on automatic learning procedures for categorial grammars of natural languages The research program spans a number of intertwined disciplines including syntax semantics learnability theory logic and computer science The theoretical framework employed is an extension of categorial grammar that has come to be called multimodal or type logical grammar The first part of the book presents an expository summary of how grammatical sentences of any language can be deduced with a specially designed logical calculus that treats syntactic categories as its formulae Some such Universal Type Logic is posited to underlie the human language faculty and all linguistic variation is captured by the different systems of semantic and syntactic categories which are assigned in the lexicons of different languages The remainder of the book is devoted to the explicit formal development of computer algorithms which can learn the lexicons of type logical grammars from learning samples of annotated sentences The annotations consist of semantic terms expressed in the lambda calculus and may also include an unlabeled tree structuring over the sentence The major features of the research include the following We show how the assumption of a universal linguistic component the logic of language is not incompatible with the conviction that every language needs a different system of syntactic and semantic categories for its proper description The supposedly universal linguistic categories descending from antiquity noun verb etc are summarily discarded Languages are here modeled as consisting primarily of sentence trees labeled with semantic structures a new mathematical class of such term labeled tree languages is developed which cross cuts the well known Chomsky hierarchy and provides a formal restrictive condition on the nature of human languages The human language acquisition mechanism is postulated to be biased such that it assumes all input language samples are drawn from the above syntactically homogeneous class in this way the universal features of human languages arise not just from the innate logic of language but also from the innate biases which govern language learning This project represents the first complete explicit attempt to model the aquisition of human language since Steve Pinker s groundbreaking 1984 publication *Language Learnability and Language Development*

Deductive Verification of Object-oriented Software Benjamin Weiß,2014-08-18 Software systems play a central role in modern society and their correctness is often crucially important Formal specification and verification are promising approaches for ensuring correctness more rigorously than just by testing This work presents an approach for deductively verifying design by contract specifications of object oriented programs The approach is based on dynamic logic and addresses the challenges of modularity and automation using dynamic frames and predicate abstraction

Functional and Logic Programming Jeremy Gibbons,Dale Miller,2024-05-16 This book constitutes the proceedings of the 17th International Symposium on Functional and Logic Programming FLOPS 2024 held in Kumamoto Japan in May 2024 The 15 papers presented in this

volume were carefully reviewed and selected from 28 submissions The scope includes all aspects of the design semantics theory applications implementations and teaching of declarative programming FLOPS speci cally aims to promote cross fertilization between theory and practice and among di erent styles of declarative programming Logical Methods Greg Restall,Shawn Standefer,2023-01-03 An accessible introduction to philosophical logic suitable for undergraduate courses and above Rigorous yet accessible Logical Methods introduces logical tools used in philosophy including proofs models modal logics meta theory two dimensional logics and quantification for philosophy students at the undergraduate level and above The approach developed by Greg Restall and Shawn Standefer is distinct from other texts because it presents proof construction on equal footing with model building and emphasizes connections to other areas of philosophy as the tools are developed Throughout the material draws on a broad range of examples to show readers how to develop and master tools of proofs and models for propositional modal and predicate logic to construct and analyze arguments and to find their structure to build counterexamples to understand the broad sweep of formal logic s development in the twentieth and twenty first centuries and to grasp key concepts used again and again in philosophy This text is essential to philosophy curricula regardless of specialization and will also find wide use in mathematics and computer science programs Features An accessible introduction to proof theory for readers with no background in logic Covers proofs models modal logics meta theory two dimensional logics quantification and many other topics Provides tools and techniques of particular interest to philosophers and philosophical logicians Features short summaries of key concepts and skills at the end of each chapter Offers chapter by chapter exercises in two categories basic designed to reinforce important ideas and challenge designed to push students understanding and developing skills in new directions Software, Services, and Systems Rocco De Nicola,Rolf Hennicker,2015-03-05 This book is dedicated to Professor Martin Wirsing on the occasion of his emeritation from Ludwig Maximilians Universit t in Munich Germany The volume is a reflection with gratitude and admiration on Professor Wirsing s life highly creative remarkably fruitful and intellectually generous life It also gives a snapshot of the research ideas that in many cases have been deeply influenced by Professor Wirsing s work The book consists of six sections The first section contains personal remembrances and expressions of gratitude from friends of Professor Wirsing The remaining five sections consist of groups of scientific papers written by colleagues and collaborators of Professor Wirsing which have been grouped and ordered according to his scientific evolution More specifically the papers are concerned with logical and algebraic foundations algebraic specifications institutions and rewriting foundations of software engineering service oriented systems and adaptive and autonomic systems **Logic** Paul Tomassi,2013-05-13 Bringing elementary logic out of the academic darkness into the light of day Paul Tomassi makes logic fully accessible for anyone attempting to come to grips with the complexities of this challenging subject Including student friendly exercises illustrations summaries and a glossary of terms Logic introduces and explains The Theory of Validity The Language of Propositional Logic Proof Theory for

Design, Specification and Verification of Interactive Systems '96 Francois Bodart,Jean Vanderdonckt,2012-12-06 Making systems easier to use implies an ever increasing complexity in managing communication between users and applications Indeed an increasing part of the application code is devoted to the user interface portion In order to manage this complexity it is important to have tools notations and methodologies which support the designer s work during the refinement process from specification to implementation Selected revised papers from the Eurographics workshop in Namur review the state of the art in this area comparing the different existing approaches to this field in order to identify the principle requirements and the most suitable notations and indicate the meaningful results which can be obtained from them

The Semantic Web: Research and Applications Enrico Franconi,Michael Kifer,Wolfgang May,2007-06-23 This book constitutes the refereed proceedings of the 4th European Semantic Web Conference ESWC 2007 held in Innsbruck Austria in June 2007 Coverage includes semantic Web services ontology learning inference and mapping social semantic Web ontologies personalization foundations of the semantic Web natural languages and ontologies and querying and Web data models

The Deductive Spreadsheet Iliano Cervesato,2013-09-06 This book describes recent multidisciplinary research at the confluence of the fields of logic programming database theory and human computer interaction The goal of this effort was to develop the basis of a deductive spreadsheet a user productivity application that allows users without formal training in computer science to make decisions about generic data in the same simple way they currently use spreadsheets to make decisions about numerical data The result is an elegant design supported by the most recent developments in the above disciplines The first half of the book focuses on the deductive engine that underlies this application the foundations that users do not see After giving a mathematical model of traditional spreadsheet applications we extend them with operators to perform a number of relational tasks similar to the user view of a database but in a spreadsheet context Expressing this extension in a logic programming framework is a natural step towards giving it powerful deductive capabilities The second half of the book deals with the user interface the part of the application with which the user actually interacts We review the elements of the graphical user

interface of traditional spreadsheet applications and describe practical methodologies for designing user interfaces borrowed from the field of cognitive psychology We then propose a design that conservatively integrates mechanisms for a user to take advantage of the new deductive capabilities This is followed by the results of some preliminary usability experiments The book will appeal to researchers and practitioners in the various areas underlying this work Researchers will not only find interesting new developments in their domains but will also learn how to achieve a multidisciplinary focus Practitioners will find fully developed solutions to numerous problems that are not easily solvable using traditional spreadsheet applications

logic programs that can also be viewed as a Turing complete relational extension of Bayesian networks
