Guidelines for the Treatment of Malaria. Third Edition World Health Organization,2015-08-13 Malaria remains an important cause of illness and death in children and adults in countries in which it is endemic Malaria control requires an integrated approach including prevention primarily vector control and prompt

treatment with effective antimalarial agents Malaria case management consisting of prompt diagnosis and effective treatment remains a vital component of malaria control and elimination strategies Since the publication of the first edition of the Guidelines for the treatment of malaria in 2006 and the second edition in 2010 all countries in which *P falciparum* malaria is endemic have progressively updated their treatment policy from use of ineffective monotherapy to the currently recommended artemisinin based combination therapies ACT This has contributed substantially to current reductions in global morbidity and mortality from malaria Unfortunately resistance to artemisinins has arisen recently in *P falciparum* in South East Asia which threatens these gains This third edition of the WHO Guidelines for the treatment of malaria contains updated recommendations based on a firmer evidence base for most antimalarial drugs and in addition include recommendation on the use of drugs to prevent malaria in groups at high risk The Guidelines provide a framework for designing specific detailed national treatment protocols taking into account local patterns of resistance to antimalarial drugs and health service capacity It provides recommendations on treatment of uncomplicated and severe malaria in all age groups all endemic areas in special populations and several complex situations In addition on the use of antimalarial drugs as preventive therapy in healthy people living in malaria endemic areas who are high risk in order to reduce morbidity and mortality from malaria The Guidelines are designed primarily for policy makers in ministries of health who formulate country specific treatment guidelines Other groups that may find them useful include health professionals and public health and policy specialists that are partners in health or malaria control and the pharmaceutical industry The treatment recommendations in the main document are brief for those who wish to study the evidence base in more detail a series of annexes is provided with references to the appropriate sections of the main document

Forensic and Ethical Issues in Military Behavioral Health Elspeth Cameron Ritchie, 2014 **Pharmaceutical and Medical Device Safety** Sonia Macleod, Sweta Chakraborty, 2019-02-21 This book examines how regulatory and liability mechanisms have impacted upon product safety decisions in the pharmaceutical and medical devices sectors in Europe the USA and beyond since the 1950s Thirty five case studies illustrate the interplay between the regulatory regimes and litigation Observations from medical practice have been the overwhelming means of identifying post marketing safety issues Drug and device safety decisions have increasingly been taken by public regulators and companies within the framework of the comprehensive regulatory structure that has developed since the 1960s In general product liability cases have not identified or defined safety issues and function merely as compensation mechanisms This is unsurprising as the thresholds for these two systems differ considerably regulatory action can be triggered by the possibility that a product might be harmful whereas establishing liability in litigation requires proving that the product was actually harmful As litigation normally post dates regulatory implementation the private enforcement of public law has generally not occurred in these sectors This has profound implications for the design of sectoral regulatory and liability regimes including associated features such as extended liability

law class actions and contingency fees This book forms a major contribution to the academic debate on the comparative utility of regulatory and liability systems on public versus private enforcement and on mechanisms of behaviour control
