When the Asteroid Hits Allen A. Debus, 2024-10-04 The incomprehensible notion of a very large chunk of ice or rock from outer space smashing into the Earth has only become mainstream within the past two centuries Though early writers imagined the utterly fantastic consequences of comet collisions and speculated on the devastation they might wreak it was not until the 1980s when scientists finally resolved that dinosaurs were extinguished by an asteroid 66 million years ago This startling announcement

captivated the media and tilted the science fiction world but in reality history may have been punctuated repeatedly by such events This book collects and analyzes ideas of asteroid comet and planetary impacts with Earth spanning two centuries from the first realization of extinctions in fossil records to the new millennium reflected in scores of sci fi stories films and televised science documentaries The author examines social and geopolitical fears tied to the prospect of a cosmic borne catastrophe Science fiction and speculation are artfully melded
