Progress in Physics, vol. 4/2013 Dmitri Rabounski, Florentin Smarandache, Larissa Borissova, The Journal on Advanced Studies in Theoretical and Experimental Physics including Related Themes from Mathematics Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Urban Education Karen Symms Gallagher,Rodney Goodyear,Dominic Brewer,Robert Rueda,2013-03-19 Many factors complicate the education of urban students Among them have been issues related to population density racial ethnic cultural and linguistic diversity poverty racism individual and institutional and funding levels Although urban educators have been addressing these issues for decades placing them under the umbrella of urban education and treating them as a specific area of practice and inquiry is relatively recent Despite the wide adoption of the term a consensus about its meaning exists at only the broadest of levels In short urban education remains an ill defined concept This comprehensive volume addresses this definitional challenge and provides a 3 part conceptual model in which the achievement of equity for all regardless of race gender or ethnicity is an ideal that is central to urban education The model also posits that effective urban education

requires attention to the three central issues that confronts all education systems a accountability of individuals and the institutions in which they work b leadership which occurs in multiple ways and at multiple levels and c learning which is the raison d'être of education Just as a three legged stool would fall if any one leg were weak or missing each of these areas is essential to effective urban education and affects the others
