Mollicutes are known for a number of unique microbiological features which have prompted researchers to investigate their basic applied and medical aspects. They are mostly parasitic or symbiotic to a variety of animals and plants living on or within the eukaryotic cells. Spiroplasmas recognized by their characteristic spiral shape and active twitching motility are associated with insects and/or plants. *S. poulsonii* causes a remarkable reproductive phenotype called male killing of their insect hosts. *S. citri* and *S. kunkelii* are notorious as devastating pathogens of citrus and maize respectively. Mycoplasmas are not only medically important as human and animal pathogens like *M. pneumoniae* and *M. genitalium* but also intensively investigated as minimal genome bacterial models. Microbial genome synthesis and engineering technologies have been developed mainly on *M. mycoides* and *M. capricolum*. Some mycoplasmas are known for their capability of unique gliding motility. Phytoplasmas are obligatorily parasitic to plant phloem tissues and vectored by plant sucking insects, often causing spectacular plant phenotypes like phyllody, virescence, witch's broom, etc.

*Digital Health Technologies for Shared Decision Making* Marcus Cheetham, Christoph A. Meier, Nikola Biller-Andorno, Helena Canhao, Anna Lisa Martin-Niedecken, Annina

Gähwiler, 2025-05-22. Patient decision aids provide a promising means to empower patients to prepare and participate in Shared Decision Making (SDM) with health care professionals. A wide range of clinically validated and non-validated digital and non-digital patient decision aids continue to be developed for use in diverse settings and clinical interventions. The end users of a given aid may be heterogeneous in their needs, abilities, backgrounds, and personal characteristics. Many patient decision aids are developed with the aim of helping patients clarify and communicate their subjective values and preferences in relation to the medical choices at hand. Knowledge of these values and preferences can help patients and health care professionals determine the medical intervention that is right for the patient. Digital health technologies present unique opportunities for creating new ways to advance the design, adoption, usage, and evaluation of patient-centred decision aids and support the clarification and communication of subjective values and preferences. However, there is a dearth of systematic research on these opportunities. This Research Topic focuses on the current use of and the opportunities that digital technologies present for furthering the design, development, deployment, and usefulness of patient decision aids. Potential themes include but are not limited to: 1. Digital technology and patient decision aids; 2. New approaches, designs, developments, and innovations; 3. Human factors in elucidating subjective values and preferences; 4. Awareness and real-world use of digital patient decision aids; 5. Usability and acceptability of digital patient decision aids; 6. Current and potential applications in different settings; 7. Barriers and facilitators to use of digital technology in SDM; 8. Future possibilities and challenges of patient decision aids and digital technology; 9. Inclusion, diversity, and accessibility of patient decision aids with digital technology; and 10. Ethical, technical, and regulatory design considerations. This Research Topic welcomes original research, review, method, and theory and perspective articles that address the diversity of themes around digital health technologies and human factors in patient decision aids. Brief research reports and mini reviews are also encouraged. Articles

types should be selected that correspond with the stage of research and scope of the contribution      **Research 1970** United States. Social and Rehabilitation Service.
