Sex, Gender, Ethics and the Darwinian Evolution of Mankind Michel Veuille,2024-06-28 Sex Gender Ethics and the Darwinian Evolution of Mankind examines the impact of Darwin s Descent of Man on contemporary biology and the humanities Its publication in 1871 was a founding event in anthropology Its content was primarily concerned with the development of sexual life social life and intellectual life not only as outcomes of evolution but as components that have actively intermixed over time with the evolutionary mechanism of natural selection The stamp of Darwinism on modern thought is still very important and brings novelties to academic studies Several fields influenced by Darwinian anthropology developed in recent decades including evolutionary ethics the evolution

of sociality and sexual communication in animal and plant species Sociobiology and evolutionary psychology are topics that draw heavily on Darwin's *Descent of Man* The understanding of Darwin's thought has also progressed greatly in recent decades following the systematic study of Darwin's correspondence and notebooks leading to a reassessment of the development of his thought on humans social groups and heredity and how they come together in his theory of evolution The book combines a historical perspective on Darwin's achievement and his legacy It will be of interest to students and scholars in a variety of fields from experimental biology to the social and historical sciences

No Free Lunch William A. Dembski, 2007-02 Darwin's greatest accomplishment was to show how life might be explained as the result of natural selection But does Darwin's theory mean that life was unintended William A Dembski argues that it does not In this book Dembski extends his theory of intelligent design Building on his earlier work in *The Design Inference* Cambridge 1998 he defends that life must be the product of intelligent design Critics of Dembski's work have argued that evolutionary algorithms show that life can be explained apart from intelligence But by employing powerful recent results from the No Free Lunch Theory Dembski addresses and decisively refutes such claims As the leading proponent of intelligent design Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate

The Living Age, 1897 *Littell's Living Age*, 1897 [God and Design](#) Neil A. Manson, 2003-09-02 Recent discoveries in physics cosmology and biochemistry have captured the public imagination and made the Design Argument the theory that God created the world according to a specific plan the object of renewed scientific and philosophical interest This accessible but serious introduction to the design problem brings together new perspectives from prominent scientists and philosophers including Paul Davies Richard Swinburne Sir Martin Rees Michael Behe Elliot Sober and Peter van Inwagen It probes the relationship between modern science and religious belief considering their points of conflict and their many points of similarity Is the real God of creationism the master clockmaker who sets the world's mechanism on a perfectly enduring course or a miraculous presence who continually intervenes in and alters the world we know Are science and faith or evolution and creation really in conflict at all Expanding the parameters of a lively and urgent debate *God and Design* considers how perennial questions of origin continue to fascinate and disturb us
