Global Inequalities Orkan Köyağasıoğlu,2020-06-24 Globalization is characterized by a systemic interconnection in

which what hapInequality has been on the rise across the globe and living conditions are vastly unequal between different places in the world Currently the richest 1% own 45% of the world s wealth The consequence is that some people are able to enjoy healthy wealthy happy lives whilst others continue to live in ill health poverty and sorrow Rapid economic growth in Asia particularly China and India has lifted many people out of extreme poverty Nevertheless the wealth divide is steadily growing According to Oxfam between 2009 and 2018 the number of billionaires it took to equal the wealth of the world s poorest 50 percent fell from 380 to 26 Those with extreme wealth have often accumulated their fortunes on the backs of people around the world who work for poor wages and under dangerous conditions Women are scarce at the top and overrepresented at the bottom Gender discrimination in the workplace contributes significantly to these persistent economic divides There are also large differences in wealth across racial groups Long standing racial discrimination in many forms including in education hiring and pay practices contribute to persistent earnings gaps Inequalities have dramatically strengthened the economic and political power of those individuals at the top *English Mechanic and Mirror of Science and Art* ,1887
