Nonverbal Learning Disabilities in Children John M. Davis, Jessica Broitman, 2011-05-04 Although it has yet to be recognized by the American Psychiatric Association s Diagnostic and Statistical Manual DSM nonverbal learning disabilities NVLD in children are a growing concern NVLD are receiving increased attention from researchers as well as from clinicians encountering these conditions in their young clients At the same time reliable information on effective interventions for NVLD has lagged behind this interest Nonverbal Learning Disabilities in Children Bridging the Gap Between Science and Practice offers a well rounded understanding of NVLD placing it within the context of other developmental disorders most notably high functioning autism and Asperger s syndrome The most current genetic environmental and neurobiological theories of and research into the causes of NVLD e g the white matter model in depth diagnostic methods and quality interventions are examined Using an evidence based approach this groundbreaking volume Conceptualizes NVLD as a disorder with subtypes Differentiates between diagnostic criteria for NVLD and Asperger s Syndrome Analyzes the co occurrence of NVLD with other developmental disabilities and psychological disorders Provides a comprehensive psychoeducational assessment model Describes efficacious treatments and supports their empirical validation Offers guidelines for sustaining treatment gains through effective collaboration of school personnel and family members Nonverbal Learning Disabilities in Children is a must have reference for researchers practitioners and graduate students in school and clinical child psychology education speech

language therapy and other disciplines and professions involved in identifying and treating children with NVLD [ACCA P1 Course Notes PDF Full View Download](#) , *Executive Function in Education, First Edition* Lynn Meltzer,2011-03-17 This uniquely integrative book brings together research on executive function processes from leaders in education neuroscience and psychology It focuses on how to apply current knowledge to assessment and instruction with diverse learners including typically developing children and those with learning difficulties and developmental disabilities The role of executive function processes in learning is examined and methods for identifying executive function difficulties are reviewed Chapters describe scientifically grounded models for promoting these key cognitive capacities at the level of the individual child the classroom and the entire school Implications for teaching particular content areas reading writing and math are also discussed

Multitasking: Executive Functioning in Dual-Task and Task Switching Situations Tilo Strobach, Mike Wendt, Markus Janczyk,2018-03-27 Multitasking refers to performance of multiple tasks The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching In the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations However these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents The present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations The contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training [The Role of Working Memory and Executive Function in Communication under Adverse Conditions](#) Mary Rudner, Carine Signoret,2016-06-20 Communication is vital for social participation However communication often takes place under suboptimal conditions This makes communication harder and less reliable leading at worst to social isolation In order to promote participation it is necessary to understand the mechanisms underlying communication in different situations Human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language For communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to This process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment The extent to which these factors interact to generate adverse conditions may differ across the lifespan Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and

executive abilities such as updating and inhibition Further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness CLEP Official Study Guide College Entrance Examination Board,2006-08 A guide to preparing for the thirty four different kinds of college CLEP exams that includes information on deciding which exams to take interpreting the scores taking the tests and other related topics

NVLD and Developmental Visual-Spatial Disorder in Children Jessica Broitman,Miranda Melcher,Amy Margolis,John M. Davis,2020-10-17 This unique volume explores issues related to working with children who have nonverbal learning disability NVLD It examines how a child s psychology thoughts feelings beliefs affects his or her functioning and learning In addition the book addresses how a child s experiences are processed through individual personality psychology culture environment and economic circumstances and family dynamics Using these psychological organizing principles the book describes how to work most effectively with young patients with NVLD It offers a new model and definition for understanding NVLD emphasizing its core deficit of visual spatial processing In addition this book addresses efforts to rename NVLD to developmental visual spatial disorder DVSD It describes the 11 possible subtypes as including a primary deficit in visual spatial processes and impairment in several additional functional domains including executive functioning social emotional deficits academic achievement and motor coordination The book highlights the need for psychologically minded treatment and provides specific intervention guidelines It details how to conduct the intake process and create a treatment plan and

team and offers practical suggestions for working with a patient's family members. In addition, the book addresses the importance of working with a consistent psychological theory such as control mastery theory (CMT). It describes the Brooklyn Learning Center Model for treating NVLD and offers guidelines for interventions to support patients academically. The book provides a comprehensive approach to the neuropsychological assessment of NVLD as well as examples of visual spatial sensory perception, executive functioning, academics, social emotional deficits, and motor coordination interventions and all forms used to gather information from patients. Key areas of coverage include: Definition of nonverbal learning disability (NVLD), Efforts toward inclusion in the Diagnostic and Statistical Manual (DSM) and for renaming it to a developmental visual spatial disorder (DVSD), Guide to general diagnostic testing and assessment, Developing a treatment plan and team for NVLD patients, NVLD therapy and tutoring priorities, NVLD and Developmental Visual Spatial Disorder in Children. This is an essential reference for clinicians, therapists, and other professionals as well as researchers, professors, and graduate students in school and clinical child psychology, special education, speech language therapy, developmental psychology, pediatrics, social work, as well as all interrelated disciplines.
