Renewable Energy and Sustainable Buildings Ali Sayigh, 2019-08-30 This book contains selected papers presented during the World Renewable Energy Network's 28th anniversary congress at the University of Kingston in London. The forum highlighted the integration of renewables and sustainable buildings as the best means to combat climate change. In depth chapters written by the world's leading experts highlight the most current research and technological breakthroughs and discuss policy, renewable energy technologies and applications in all sectors for heating and cooling, agricultural applications, water desalination, industrial applications and for the transport sectors. Presents cutting edge research in green building and renewable energy from all over the world. Covers the most up to date research, developments, government policies, business models, best practices and innovations. Contains case studies and examples to enhance practical application of the technologies.

Planning and Executing Credible Experiments Robert J. Moffat, Roy W. Henk, 2021-02-02 Covers experiment planning, execution, analysis and reporting. This single source resource guides readers in planning and conducting credible experiments for engineering, science, industrial processes, agriculture and business. The text takes experimenters all the way through conducting a high impact experiment from initial conception through execution of the experiment to a defensible final report. It prepares the reader to anticipate the choices faced during each stage. Filled with real world examples from engineering, science and industry. *Planning and Executing Credible Experiments: A Guidebook for Engineering Science, Industrial Processes, Agriculture and Business* offers chapters that challenge experimenters at each stage of planning and execution and emphasizes uncertainty analysis as a design tool in addition to its role for reporting results. Tested over decades at Stanford University and internationally, the text employs two powerful, free, open source software tools: GOSSET to optimize experiment design and R for statistical computing and graphics. A website accompanies the text providing additional resources and software downloads. A comprehensive guide to experiment planning, execution and analysis. Leads from initial conception through the experiment's launch to final report. Prepares the reader to anticipate the choices faced throughout an experiment. Hones the motivating question. Employs principles and techniques from Design of Experiments (DoE). Selects experiment designs to obtain the most information from fewer experimental runs. Offers chapters that propose questions that an experimenter will need to ask and answer during each stage of planning and execution. Demonstrates how uncertainty analysis guides and strengthens each stage. Includes examples from real life industrial experiments. Accompanied by a website hosting open source software. *Planning and Executing Credible Experiments* is an excellent resource for graduates and senior undergraduates as well as professionals across a wide variety of engineering disciplines.
