## **Explain Clearly The Similarity:**

AXIOMATIZATION OF BASIC ELEMENTS OF SUBJECTIVE DIALECTICS ZHIYONG DONG,2021-02-22 The publication of this book indicates the new epoch in the history of the development of dialectics This book gives the answers to why people have to put forward the concepts and ideas of practice rationality labor subject object subjectivity objectivity word being moments pure idea notion conception phenomenon form essence matter content quality quantity measure time space relative absolute the most basic and primary starting point of time scaling contradiction antimony unity of opposites natural dialectics social dialectics objective dialectics subjective dialectics philosophy science religion laws morality politics sovereignty etc from the aspects of dialectics This book also tells about the usage of loan of the concepts of time in languages and the defects of some outstanding scholars in their theories of time such as Martin Heidegger Albert Einstein G W F Hegel Isaac Newton Immanuel Kant Stephen Hawking etc      *Text Data Management and Analysis* ChengXiang Zhai,Sean Massung,2016-06-30 Recent years have seen a dramatic growth of natural language text data including web pages news articles scientific literature emails enterprise documents and social media such as blog articles forum posts product reviews and tweets This has led to an increasing demand for powerful software tools to help people analyze and manage vast amounts of text data effectively and efficiently Unlike data generated by a computer system or sensors text data are usually generated directly by humans and are accompanied by semantically rich content As such text data are especially valuable for discovering knowledge about human opinions and preferences in addition to many other kinds of knowledge that we encode in text In contrast to structured data which conform to well defined schemas thus are relatively easy for computers to handle text has less explicit structure requiring computer processing toward understanding of the content encoded in text The current technology of natural language processing has not yet reached a point to enable a computer to precisely understand natural language text but a wide range of statistical and heuristic approaches to analysis and management of text data have been developed over the past few decades They are usually very robust and can be applied to analyze and manage text data in any natural language and about any topic This book provides a systematic introduction to all these approaches with an emphasis on covering the most useful knowledge and skills required to build a variety of practically useful text information systems The focus is on text mining applications that can help users analyze patterns in text data to extract and reveal useful knowledge Information retrieval systems including search engines and recommender systems are also covered as supporting technology for text mining applications The book covers the major concepts techniques and ideas in text data mining and information retrieval from a practical viewpoint and includes many hands on exercises designed with a companion software toolkit i e MeTA to help readers learn how to apply techniques of text mining and information retrieval to real world text data and how to experiment with and improve some of the algorithms for interesting application tasks The book can be used as a textbook for a computer science undergraduate course or a reference book for practitioners working on relevant problems in

analyzing and managing text data      **The Normative and the Evaluative** Rach Cosker-Rowland, 2019-01-31 Many have been attracted to the idea that for something to be good there just have to be reasons to favour it This view has come to be known as the buck passing account of value According to this account for pleasure to be good there need to be reasons for us to desire and pursue it Likewise for liberty and equality to be values there have to be reasons for us to promote and preserve them Extensive discussion has focussed on some of the problems that the buck passing account faces such as the wrong kind of reason problem Less attention however has been paid as to why we should accept the buck passing account or what the theoretical pay offs and other implications of accepting it are The Normative and the Evaluative provides the first comprehensive motivation and defence of the buck passing account of value Rach Cosker Rowland argues that the buck passing account explains several important features of the relationship between reasons and value as well as the relationship between the different varieties of value in a way that its competitors do not She shows that alternatives to the buck passing account are inconsistent with important views in normative ethics uninformative and at odds with the way in which we should see practical and epistemic normativity as related In addition she extends the buck passing account to provide an account of moral properties as well as all other normative and deontic properties and concepts such as fittingness and ought in terms of reasons

*Fuzzy Databases* Frederick E. Petry, 2012-12-06 This volume presents the results of approximately 15 years of work from researchers around the world on the use of fuzzy set theory to represent imprecision in databases The maturity of the research in the discipline and the recent developments in commercial industrial fuzzy databases provided an opportunity to produce this survey In this introduction we will describe briefly how fuzzy databases fit into the overall design of database systems and then overview the organization of the text FUZZY DATABASE LANDSCAPE The last five years have been witness to a revolution in the database research community The dominant data models have changed and the consensus on what constitutes worthwhile research is in flux Also at this time it is possible to gain a perspective on what has been accomplished in the area of fuzzy databases Therefore now is an opportune time to take stock of the past and establish a framework A framework should assist in evaluating future research through a better understanding of the different aspects of imprecision that a database can model 1 1

*Understanding the Universe* James B. Seaborn, 1998 Intended for undergraduate non science majors satisfying a general education requirement or seeking an elective in natural science this is a physics text but with the emphasis on topics and applications in astronomy The perspective is thus different from most undergraduate astronomy courses rather than discussing what is known about the heavens this text develops the principles of physics so as to illuminate what we see in the heavens The fundamental principles governing the behaviour of matter and energy are thus used to study the solar system the structure and evolution of stars and the early universe The first part of the book develops Newtonian mechanics towards an understanding of celestial mechanics while chapters on electromagnetism and elementary quantum theory lay the foundation of the modern theory of the structure of matter and the role of radiation

in the constitution of stars Kinetic theory and nuclear physics provide the basis for a discussion of stellar structure and evolution and an examination of red shifts and other observational data provide a basis for discussions of cosmology and cosmogony

**Introduction to Objectivist Epistemology** Ayn Rand,1990-04-26 Today man's mind is under attack by all the leading schools of philosophy We are told that we cannot trust our senses that logic is arbitrary that concepts have no basis in reality Ayn Rand opposes that torrent of nihilism and she provides the alternative in this eloquent presentation of the essential nature and power of man's conceptual faculty She offers a startlingly original solution to the problem that brought about the collapse of modern philosophy the problem of universals This brilliantly argued superbly written work together with an essay by philosophy professor Leonard Peikoff is vital reading for all those who seek to discover that human beings can and should live by the guidance of reason

*Theorems in School* Paolo Boero,2007 This book addressing mathematics educators teacher trainers and teachers is published as a contribution to the endeavour of renewing the teaching of proof and theorems on the basis of historical epistemological cognitive and didactical considerations

**On Images, Visual Culture, Memory and the Play without a Script** Matthias Smalbrugge,2021-12-30 Matthias Smalbrugge compares modern images to plays without a script while they appear to refer to a deeper identity or reality it is ultimately the image itself that truly matters He argues that our modern society of images is the product of a destructive tendency in the Christian notion of the image in general and Augustine of Hippo's in particular This insight enables him to decode our current scripts of image As we live in an increasingly visual culture we are constantly confronted with images that seem to exist without a deeper identity or reality but did this referential character really get lost over time Smalbrugge first explores the roots of the modern image by analysing imagery what it represents and its moral state within the framework of Platonic philosophy He then moves to the Augustinian heritage in particular the Soliloquies the Confessions and the Trinity where he finds valuable insights into images and memory He explores within the trinitarian framework the crossroads of a theology of grace and a theology based on Neoplatonic views Smalbrugge ultimately answers two questions what happened to the referential character of the image and can it be recovered

[Explaining Inequalities in School Achievement](#) Roy Nash,2016-04-15 Inequalities in educational

opportunity have been a persistent feature of all school systems for generations with conventional explanations of differences in educational attainment tending to be reduced to either quantitative or non quantitative list theories In this groundbreaking book Roy Nash argues that a realist framework for the sociological explanation of educational group differences can and must be constructed A move to such an explanatory framework will allow us to take into account the social influences of early childhood development the later emergence of social identities and the nature of the social class impact of educational and career decision making By building on the critical analyses of the theories of Bourdieu Boudon and Bernstein this book makes a vital contribution to the current policy and theoretical debate about the causes of educational inequality **Algorithms on**

**Strings, Trees, and Sequences** Dan Gusfield,1997-05-28 String algorithms are a traditional area of study in computer science In recent years their importance has grown dramatically with the huge increase of electronically stored text and of molecular sequence data DNA or protein sequences produced by various genome projects This book is a general text on computer algorithms for string processing In addition to pure computer science the book contains extensive discussions on biological problems that are cast as string problems and on methods developed to solve them It emphasises the fundamental ideas and techniques central to today s applications New approaches to this complex material simplify methods that up to now have been for the specialist alone With over 400 exercises to reinforce the material and develop additional topics the book is suitable as a text for graduate or advanced undergraduate students in computer science computational biology or bio informatics Its discussion of current algorithms and techniques also makes it a reference for professionals **Metaphor,**
