Information Hiding Andreas Pfitzmann,2006-12-29 Although the animal may be as Nietzsche argued ahistorical living completely in the present it nonetheless plays a crucial role in human history The fascination with animals that leads not only to a desire to observe and even live alongside them but to capture or kill them is found in all civilizations The essays collected in *Beastly Natures* show how animals have been brought into human culture literally helping to build our societies as domesticated animals have done or contributing often in problematic ways to our concept of the wild The book begins with a group of essays that approach the historical relevance of human animal relations seen from the perspectives of various disciplines and suggest ways in

which animals might be brought into formal studies of history Differences in species and location can greatly affect the shape of human animal interaction and so the essays that follow address a wide spectrum of topics including the demanding fate of the working horse the complex image of the American alligator at turns a dangerous predator and a tourist attraction the zoo gardens of Victorian England the iconography of the rhinoceros and the preference it reveals in society for myth over science relations between humans and wolves in Europe and what we can learn from society's enthusiasm for political animals such as the pets of the American presidents and the Soviet Union's space dogs Taken together these essays suggest new ways of looking not only at animals but at human history Contributors Mark V Barrow Jr Virginia Tech Peter Edwards Roehampton University Kelly Enright Rutgers University Oliver Hochadel Universitat Autònoma de Barcelona Uwe Lübken Rachel Carson Center Munich Garry Marvin Roehampton University Clay McShane Northeastern University Amy Nelson Virginia Tech Susan Pearson Northwestern University Helena Pycior University of Wisconsin Milwaukee Harriet Ritvo Massachusetts Institute of Technology Nigel Rothfels University of Wisconsin Milwaukee Joel A Tarr Carnegie Mellon University Mary Weismantel Northwestern University

Hiding Data - Selected Topics Rudolf Ahlswede, 2016-04-18 Devoted to information security this volume begins with a short course on cryptography mainly based on lectures given by Rudolf Ahlswede at the University of Bielefeld in the mid 1990s It was the second of his cycle of lectures on information theory which opened with an introductory course on basic coding theorems as covered in Volume 1 of this series In this third volume Shannon's historical work on secrecy systems is detailed followed by an introduction to an information theoretic model of wiretap channels and such important concepts as homophonic coding and authentication Once the theoretical arguments have been presented comprehensive technical details of AES are given Furthermore a short introduction to the history of public key cryptology RSA and El Gamal cryptosystems is provided followed by a look at the basic theory of elliptic curves and algorithms for efficient addition in elliptic curves Lastly the important topic of oblivious transfer is discussed which is strongly connected to the privacy problem in communication Today the importance of this problem is rapidly increasing and further research and practical realizations are greatly anticipated This is the third of several volumes serving as the collected documentation of Rudolf Ahlswede's lectures on information theory Each volume includes comments from an invited well known expert In the supplement to the present volume Rüdiger Reischuk contributes his insights Classical information processing concerns the main tasks of gaining knowledge and the storage transmission and hiding of data The first task is the prime goal of Statistics For transmission and hiding data Shannon developed an impressive mathematical theory called Information Theory which he based on probabilistic models The theory largely involves the concept of codes with small error probabilities in spite of noise in the transmission which is modeled by channels The lectures presented in this work are suitable for graduate students in Mathematics and also for those working in Theoretical Computer Science Physics and Electrical Engineering with a background in basic Mathematics The lectures can be used as the basis for courses or to supplement courses in many ways

Ph D students will also find research problems often with conjectures that offer potential subjects for a thesis More advanced researchers may find questions which form the basis of entire research programs

As the Global Information Infrastructure is being built we are writing portions of the Constitution for Cyberspace I've been fortunate to have a front row seat and to share much of this with my students The original reading and selection of materials was made by the first cohort of students in The George Washington University Accelerated Master of Science Program in Telecommunications and Computers at the Ashburn Virginia campus They worked many long hours reading debating and selecting materials for this book In addition Bob Patton spent a great deal of time scanning and editing the material Nestor Torres prepared the index And Harish Nalinakshan provided an enormous amount of technical and administrative assistance and kept the project on track as new developments took place in the debate and new papers and legislation reflected these As with most readings books some of the selections cover similar material We have tried to hold this duplication to an acceptable level

The Secret Geometry of the Dollar Ken McGrath, 2002-12-12 This book is intended as research It has been written so the average reader will be able to see the fascinating patterns of symbolic mathematics and geometry hidden in the design of the dollar bill Much of its esoteric symbolism will be shown and analyzed from history of the long train of tradition that led up to the dollars present design Although some of these ideas easily lead to wide ranging philosophical speculation and I reserve the right to drag out the soapbox occasionally I will none the less try to maintain a neutral or scientific approach to these topics Most of this story has been written in the first person like a letter to the reader like a notebook In order that the reasoning that led me to these discoveries might be more easily understood I have tried to show my slow progress and mistakes more or less as they happened and the gradual development of my thinking as I went along But to all of this I will add some hindsight and a certain amount of convenient arrangement of the order of some of the discoveries for clarity Without this most of my starting points of investigation and conclusions will not be understandable and many of my earlier dubious paths can be left unsaid Since this curious and strange design is not yet completely known or fully analyzed this investigation is by no means finished and should be an invitation for more adventurous readers to make their own discoveries This study is a much larger task than

it would appear at first glance This writing will provide many of the mathematical keys and clues to enable readers to start to investigate on their own or to demonstrate to themselves the validity of those things shown here But these are hidden symbols both philosophical and mathematical and as such need to be puzzled out
