The Life Cycle of Clusters Dirk Fornahl, Robert Hassink, 2017-04-28 One size fits all cluster policies have been rightly criticized in the literature. One promising approach is to focus cluster policies on the specific needs of firms depending on the stage of development: emergence, growth, sustainment or decline. Their cluster is in. In this highly insightful book, these stage-specific cluster policies are analysed and evaluated. Moreover, several chapters also focus on smart specialization policies to promote regional development by taking into account the emergence and adaptation of clusters and industries.

Children, Young People and Critical Geopolitics Matthew C. Benwell, Peter Hopkins, 2017-05-15 Young people and in particular children have typically been marginalised in geopolitical research, positioned as too young to understand or relate to the adult-dominated world of international relations. Integrating current debates in critical geopolitics and political geography with research in children's geographies, childhood studies and youth research, this book sets out an agenda for the field of children's and young people's critical geopolitics. It considers diverse practices such as play, activism, media consumption and diplomacy to show how children's and young people's lives relate to wider regional and global geopolitical processes. Engaging with contemporary concepts in human geography including ludic geopolitics, affect, emotional geographies, intergenerationality, creative diplomacy, popular geopolitics and citizenship, the authors draw on geopolitical research with children and young people from Europe, Asia, Australasia, Africa and the Americas. The chapters highlight the ways in which young people can be enrolled, ignored, dismissed, empowered and represented by the state for geopolitical ends. Notwithstanding this state power, the research presented also shows how young people have agency and make decisions about their lives, which are influenced by wider geopolitical processes. The focus on the lives of children and young people problematises and extends what it is we think of when considering the geopolitical, which enriches as well as advances critical geopolitical enquiry and deserves to be taken seriously by political geographies more broadly.

Shareholder Cities Sai Balakrishnan, 2019-11-01 Economic corridors, ambitious infrastructural development

projects that newly liberalizing countries in Asia and Africa are undertaking are dramatically redefining the shape of urbanization. Spanning multiple cities and croplands, these corridors connect metropolises via high speed superhighways in an effort to make certain strategic regions attractive destinations for private investment. As policy makers search for decentralized and market oriented means for the transfer of land from agrarian constituencies to infrastructural promoters and urban developers, the reallocation of property control is erupting into volatile land based social conflicts. In *Shareholder Cities*, Sai Balakrishnan argues that some of India's most decisive conflicts over its urban future will unfold in the regions along the new economic corridors where electorally strong agrarian propertied classes directly encounter financially powerful incoming urban firms. Balakrishnan focuses on the first economic corridor, the Mumbai-Pune Expressway, and the construction of three new cities along it. The book derives its title from a current mode of resolving agrarian urban conflicts in which agrarian landowners are being transformed into shareholders in the corridor cities and the distributional implications of these new land transformations. Shifting the focus of the study of India's contemporary urbanization away from megacities to these in-between corridor regions, Balakrishnan explores the production of uneven urban development that unsettles older histories of agrarian capitalism and the emergence of agrarian propertied classes as protagonists in the making of urban real estate markets. *Shareholder Cities* highlights the possibilities for a democratic politics of inclusion in which agrarian urban encounters can create opportunities for previously excluded groups to stake new claims for themselves in the corridor regions.

 Activists have exposed startling forms of labor exploitation and environmental degradation in global industries leading many large retailers and brands to adopt standards for fairness and sustainability. This book is about the

idea that transnational corporations can push these standards through their global supply chains and in effect pull factories forests and farms out of their local contexts and up to global best practices For many scholars and practitioners this kind of private regulation and global standard setting can provide an alternative to regulation by territorially bound gridlocked or incapacitated nation states potentially improving environments and working conditions around the world and protecting the rights of exploited workers impoverished farmers and marginalized communities But can private voluntary standards actually create meaningful forms of regulation Are forests and factories around the world actually being made into sustainable ecosystems and decent workplaces Can global norms remake local orders This book provides striking new answers by comparing the private regulation of land and labor in democratic and authoritarian settings Case studies of sustainable forestry and fair labour standards in Indonesia and China show not only how transnational standards are implemented on the ground but also how they are constrained and reconfigured by domestic governance Combining rich multi method analyses a powerful comparative approach and a new theory of private regulation *Rules without Rights* reveals the contours and contradictions of transnational governance Transformations in Governance is a major new academic book series from Oxford University Press It is designed to accommodate the impressive growth of research in comparative politics international relations public policy federalism environmental and urban studies concerned with the dispersion of authority from central states up to supranational institutions down to subnational governments and side ways to public private networks It brings together work that significantly advances our understanding of the organization causes and consequences of multilevel and complex governance The series is selective containing annually a small number of books of exceptionally high quality by leading and emerging scholars The series targets mainly single authored or co authored work but it is pluralistic in terms of disciplinary specialization research design method and geographical scope Case studies as well as comparative studies historical as well as contemporary studies and studies with a national regional or international focus are all central to its aims Authors use qualitative quantitative formal modeling or mixed methods A trade mark of the books is that they combine scholarly rigour with readable prose and an attractive production style The series is edited by Liesbet Hooghe and Gary Marks of the University of North Carolina Chapel Hill and Walter Mattli of the University of Oxford
