Urbanization with Chinese Characteristics: The Hukou System and Migration Kam Wing Chan, 2018-04-19 Many agree that rapid urbanization in China in the late 20th and early 21st centuries is a mega process significantly reshaping China and the global economy China's urbanization also carries a certain mystique which has long fascinated generations of scholars and journalists alike As it has turned out many of the asserted Chinese feats are mostly fancied claims or gross misinterpretations of statistics for example There does exist however an urbanization that displays rather uncommon Chinese characteristics that remain to inadequately understood Building on his three decades of careful

research Professor Kam Wing Chan expertly dissects the complexity of China's hukou system migration urbanization and their interrelationships in this set of journal articles published in the last ten years. These works range from seminal papers on Chinese urban definitions and statistics and broad perspective analysis of the hukou system of its first semi centennial to examinations of migration trends and geography and critical evaluations of China's 2014 urbanization blueprint and hukou reform plan. This convenient assemblage contains many of Chan's recent important works. Together they also form a relatively coherent set on this topic. They are essential readings to anyone serious about gaining a true understanding of the prodigious urbanization in contemporary China.

Atlas of Knowledge Katy Borner, 2015-03-20 The power of mapping principles for visualizing knowledge illustrated by many stunning large scale full color maps. Maps of physical spaces locate us in the world and help us navigate unfamiliar routes. Maps of topical spaces help us visualize the extent and structure of our collective knowledge; they reveal bursts of activity, pathways of ideas and borders that beg to be crossed. This book from the author of *Atlas of Science* describes the power of topical maps providing readers with principles for visualizing knowledge and offering as examples forty large scale and more than 100 small scale full color maps. Today data literacy is becoming as important as language literacy. Well designed visualizations can rescue us from a sea of data helping us to make sense of information, connect ideas and make better decisions in real time. In *Atlas of Knowledge* leading visualization expert Katy Borner makes the case for a systems science approach to science and technology studies and explains different types and levels of analysis. Drawing on fifteen years of teaching and tool development she introduces a theoretical framework meant to guide readers through user and task analysis, data preparation, analysis and visualization, visualization deployment and the interpretation of science maps. To exemplify the framework the *Atlas* features striking and enlightening new maps from the popular *Places Spaces Mapping Science* exhibit that range from Key Events in the Development of the Video Tape Recorder to Mobile Landscapes, Location Data from Cell Phones for Urban Analysis to Literary Empires, Mapping Temporal and Spatial Settings of Victorian Poetry to Seeing Standards: A Visualization of the Metadata Universe. She also discusses the possible effect of science maps on the practice of science.
