

The Scientific Revolution 1500's – 1700's

I. The Roots of Modern Science

How did modern science begin?

During the Middle Ages, few scholars questioned beliefs that had been long held. Europeans based their ideas on what ancient Greeks and Romans believed or on the Bible. People still thought that the earth was the center of the universe. They believed that the sun, moon, other planets, and stars moved around it. This Geocentric [Earth-centered] view of the Universe was supported by the Catholic Church during the Middle Ages.

In the mid-1500s, attitudes began to change however. Scholars started what is called the **Scientific Revolution**. It was a new way of thinking about the natural world. It was based on careful *observation and the willingness to question* old or established beliefs.

European voyages of exploration helped to bring about the Scientific Revolution. When Europeans explored new lands, they saw plants and animals that ancient writers had never seen. These discoveries led to new courses of study in the universities of Europe.

1. How was the Scientific Revolution a new way of thinking about the natural world?

II. A Revolutionary Model of the Universe

How did new ideas change accepted thinking in astronomy?

The first challenge to accepted thinking in science came in *astronomy*. In the early 1500s, Nicolaus Copernicus, a Polish astronomer, studied the stars and planets. He developed a **heliocentric theory**. Heliocentric meant sun-centered. It said that earth, like all the other planets, revolved around the sun. Copernicus did not publish his findings until just before his death. He had been afraid that his ideas would be attacked. They went against the long accepted **geocentric theory**. This theory held that the earth was at the center of the universe. In the early 1600s, Johannes Kepler used mathematics to prove that Copernicus's basic idea was correct.
