Split Manufacturing of Integrated Circuits for Hardware Security and Trust Ranga Vemuri, Suyuan Chen, 2021-05-25 Globalization of the integrated circuit IC supply chains led to many potential vulnerabilities Several attack scenarios can exploit these vulnerabilities to reverse engineer IC designs or to insert malicious trojan circuits Split manufacturing refers to the process of splitting an IC design into multiple parts and fabricating these parts at two or more foundries such that the design is secure even when some or all of those foundries are potentially untrusted Realizing its security benefits researchers have proposed split fabrication methods for 2D 2.5D and the emerging 3D ICs Both attack methods against split designs and

defense techniques to thwart those attacks while minimizing overheads have steadily progressed over the past decade This book presents a comprehensive review of the state of the art and emerging directions in design splitting for secure split fabrication design recognition and recovery attacks against split designs and design techniques to defend against those attacks Readers will learn methodologies for secure and trusted IC design and fabrication using split design methods to protect against supply chain vulnerabilities
