**Glucokinase and Glycemic Diseases** Franz M. Matschinsky, Mark A. Magnuson, 2004 The glucose phosphorylating enzyme glucokinase also known as

hexokinase IV plays a preeminent role as a glucose sensor and regulatory metabolic enzyme. The implications of this central position of glucokinase for the understanding and treatment of diabetes mellitus are far reaching. This book addresses the molecular and human genetic as well as the physiological, chemical and pharmacological aspects of the role glucokinase plays in glucose homeostasis and diseases of glucose metabolism and how the enzyme serves as the drug target for the treatment of diabetes mellitus. The collection of assays by a team of internationally renowned authors includes basic science chapters dealing with the enzymology, structure and the kinetics of hexokinases; essays describing the biochemical genetics of glucokinase-linked hypo and hyperglycemia syndromes; and papers that discuss the diverse roles of the enzyme in a variety of tissues. Finally, the book contains the latest information on the recently discovered class of weight drugs that activate glucokinase, i.e. glucokinase activators or GKAs. This volume is of great interest to basic and clinical diabetes researchers, geneticists, biochemists, physiologists and pharmacologists.

*Problems and Solutions for Horton Principles of Biochemistry* Robert N. Lindquist, Laurence A. Moran, K. G. Scrimgeour, 1993

*Foye's Principles of Medicinal Chemistry* Thomas L. Lemke, David A. Williams, 2008. The Sixth Edition of this well known text has been fully revised and updated to meet the changing curricula of medicinal chemistry courses. Emphasis is on patient focused pharmaceutical care and on the pharmacist as a therapeutic consultant rather than a chemist. A new disease state management section explains appropriate therapeutic options for asthma, chronic obstructive pulmonary disease and men's and women's health problems. Also new to this edition: Clinical Significance boxes, Drug Lists at the beginning of appropriate chapters and an eight page color insert with detailed illustrations of drug structures. Case studies from previous editions and answers to this edition's case studies are available online at thePoint.

**Textbook of Nutritional Biochemistry** Darshan Malik, Nandita Narayanasamy, V A Pratyusha, Jayita Thakur, Nimisha Sinha, 2023-11-30. This textbook for undergraduate students aims at providing an in depth understanding of the relationship between diet, nutrients, health, diseases and drug treatment. The book presents a comprehensive but detailed view of the field of Nutritional Biochemistry, balancing the historical with contemporary findings, the descriptive with the experimental, structure with function as well as the mechanistic and the clinical aspects of any particular nutrient. Though the major emphasis of the book is on Nutritional Biochemistry, the book also attempts to provide an insight into other related and relevant areas. Amongst the topics that are covered are nutraceuticals, food and nutrient interactions, the newly emerging field of the human microbiome, its interdependence on diet and human health as well as the public health concerns which is a looming burden of non-communicable diseases. Each chapter begins with an insight into the history of discovery and structure of the nutrient, its absorption and metabolism, physiological functions, ending with diseases associated with nutrient deficiency/toxicity along with a clinical perspective. Apart from this, the book emphasizes the biochemical basis of physiological responses and correlates the same with symptoms, identifying the pathophysiology. This textbook caters to students of undergraduate courses like Biochemistry, Biomedical Sciences, Biological Sciences, Life
