Mathematics for Social Justice Catherine A. Buell, Bonnie Shulman, 2021-11-17 Mathematics instructors are always looking for ways to engage students in meaningful and authentic tasks that utilize mathematics At the same time it is crucial for a democratic society to have a citizenry who can critically discriminate between fake and reliable news reports involving numeracy and apply numerical literacy to local and global issues This book contains examples of topics linking math and social justice and addresses both goals There is a broad range of mathematics used including statistical methods modeling calculus and basic algebra The range of social issues is also diverse including racial injustice mass incarceration income inequality and environmental justice There are lesson plans appropriate in many contexts service learning courses quantitative literacy reasoning courses introductory courses and classes for math majors What makes this book unique and timely is that the most previous curricula linking math and social justice have been treated from a humanist perspective This book is written by mathematicians for mathematics students Admittedly it can be intimidating for instructors trained in quantitative methods to venture into the arena of social dilemmas This volume provides encouragement support and a treasure trove of ideas to get you started The chapters in this book were originally published as a special issue of the journal PRIMUS Problems Resources and Issues in Mathematics Undergraduate Studies

Altman, 2011-12-05 For a variety of reasons, the MATLAB Java interface was never fully documented. This is really quite unfortunate. Java is one of the most widely used programming languages, having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping, [From raw MEG/EEG to publication: How to perform MEG/EEG group analysis with free academic software](#) Vladimir Litvak, Arnaud Delorme, Francois Tadel, Alexandre Gramfort, Robert Oostenveld, Srikanth S. Nagarajan, 2023-06-07 **Process Modelling and Simulation with Finite Element Methods** William B. J. Zimmerman, 2004 This book presents a systematic description and case studies of chemical engineering modelling and simulation based on the MATLAB FEMLAB tools in support of selected topics in undergraduate and postgraduate programmes that require numerical solution of complex balance equations, ordinary differential equations, partial differential equations, nonlinear equations, integro-differential equations. These systems arise naturally in analysis of transport phenomena, process systems, chemical reactions, and chemical thermodynamics and particle rate processes. Templates are given for modelling both state-of-the-art research topics, e.g. microfluidic networks, film drying, multiphase flow, population balance equations, and case studies of commonplace design calculations: mixed phase reactor design, heat transfer, flowsheet analysis of unit operations, flash distillations, etc. The great strength of this book is that it makes modelling and simulating in the MATLAB FEMLAB environment approachable to both the novice and the expert modeller. *A Guide to Hindustani Specially Designed for the Use of Officers and Men Serving in India, Including Colloquial Phrases in Persian and Roman Character and a Collection of Arzais, with Transliteration in Roman-Urdu and English Translations* George Spiers Alexander Ranking, 1895
