Nonlinear Regression Modeling for Engineering Applications

R. Russell Rhinehart,2016-08-01 Since mathematical models express our understanding of how nature behaves we use them to validate our understanding of the fundamentals about systems which could be processes equipment procedures devices or products Also when validated the model is useful for engineering applications related to diagnosis design and optimization First we postulate a mechanism then derive a model grounded in that mechanistic understanding If the model does not fit the data our understanding of the mechanism was wrong or incomplete Patterns in the residuals can guide model improvement Alternately when the model fits the data our understanding is sufficient and confidently functional for engineering applications This book details methods of nonlinear regression computational algorithms model validation interpretation of residuals and useful experimental design The focus is on practical applications with relevant methods supported by fundamental analysis This book will assist either the academic or industrial practitioner to properly classify the system choose between the various available modeling options

and regression objectives design experiments to obtain data capturing critical system behaviors fit the model parameters based on that data and statistically characterize the resulting model The author has used the material in the undergraduate unit operations lab course and in advanced control applications

The Patient Will See You Now Eric Topol, 2016-10-25

The essential guide by one of America's leading doctors to how digital technology enables all of us to take charge of our health A trip to the doctor is almost a guarantee of misery You'll make an appointment months in advance You'll probably wait for several hours until you hear the doctor will see you now but only for fifteen minutes Then you'll wait even longer for lab tests the results of which you'll likely never see unless they indicate further and more invasive tests most of which will probably prove unnecessary much like physicals themselves And your bill will be astronomical In *The Patient Will See You Now* Eric Topol one of the nation's top physicians shows why medicine does not have to be that way Instead you could use your smartphone to get rapid test results from one drop of blood monitor your vital signs both day and night and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor all at a small fraction of the cost imposed by our modern healthcare system The change is powered by what Topol calls medicine's Gutenberg moment Much as the printing press took learning out of the hands of a priestly class the mobile internet is doing the same for medicine giving us unprecedented control over our healthcare With smartphones in hand we are no longer beholden to an impersonal and paternalistic system in which doctor knows best Medicine has been digitized Topol argues now it will be democratized Computers will replace physicians for many diagnostic tasks citizen science will give rise to citizen medicine and enormous data sets will give us new means to attack conditions that have long been incurable Massive open online medicine where diagnostics are done by Facebook like comparisons of medical profiles will enable real time real world research on massive populations There's no doubt the path forward will be complicated the medical establishment will resist these changes and digitized medicine inevitably raises serious issues surrounding privacy Nevertheless the result better cheaper and more human health care will be worth it Provocative and engrossing *The Patient Will See You Now* is essential reading for anyone who thinks they deserve better health care That is for all of us
