Laser Alarm System Circuit:

Laser Security System Richa Chauhan, Rakesh Sharma, Akshay Meena, 2018-10-21 LASER Ray goes through long distance without scattering effect and the Ray is almost invisible Only the radiation point and incident point is visible So by this security project we can make an invisible boundary of a sensitive area There is two part of the system One is transmitter and other is receiver The transmitter part is built with a LASER radiator a pair of dry cell batteries an on off switch and a stand to hold it The receiver side there is a focusing LDR Light depending Resistor sensor to sense the LASER continuously The LDR sensor also holds with a stand and it connected with the main driver circuit The circuit has two parts One is filtered the signal of discontinuity ray and others is alarm circuit When anybody crossover the invisible ray the main circuit sense the discontinuity by sensor and turn on the alarm circuit If once the alarm circuit is on it will still ringing until push the reset button There is two option of ringing One is the duration of ringing depends on preset timer and another reset manually Any option can be set by DPDT switch If anybody wants to bind a sensitive area with the single ray he has to use mirror at every corner to reflect it The system has built with low cost and high performance The power consumption of the system is very low

A Geek Girl's Guide to Electronics and the Internet of Things Audrey O'Shea, 2020-09-16 A straightforward demystification of electronics and the Internet of Things A Geek Girl s Guide to Electronics and the Internet of Things breaks down and simplifies electronics and the Internet of Things for the layperson Written by a leading technical school instructor with a talent for bringing complex topics to everyday people this book provides concrete examples and practical advice for anyone interested in building repairing or studying electronics and functional Internet of Things IoT devices A Geek Girl s Guide to Electronics and the Internet of Things explores a wide range of topics including among others Ohm s and Watt s Law Series and Parallel Circuits Diodes transistors capacitors and relays Motors and Pulse with Modulation Using light to control electricity Photovoltaic Cells and Transducers Enhancing circuits with Arduino Connecting circuits to networks The distinguished author s website includes videos to help you build and enhance projects along with deeper information to enrich your learning Additionally the book goes beyond theory and teaches readers how circuit components become IoT devices and provide the data that drive our modern world The combination of hands on activities and solid pedagogy ensures long lasting retention of the material for everyone
