Current Research and Emerging Directions in Emotion-Cognition Interactions Florin Dolcos, Lihong Wang, Mara Mather, 2015-03-02 Emotion can impact various aspects of our cognition and behavior by enhancing or impairing them e g enhanced attention to and memory for emotional events or increased distraction produced by goal irrelevant emotional information On the other hand emotion processing is also susceptible to cognitive influences typically exerted in the form of cognitive control of motion or emotion regulation Despite important recent progress in understanding emotion cognition interactions a number of aspects remain unclear The present book comprises a collection of manuscripts discussing emerging evidence regarding the mechanisms underlying emotion cognition interactions in healthy functioning and alterations associated with clinical conditions in which such interactions are dysfunctional Initiated with a more restricted focus targeting 1 identification and in depth analysis of the circumstances in which emotion enhances or impairs cognition and 2 identification of the role of individual differences in these effects our book has emerged into a comprehensive collection of outstanding contributions investigating emotion cognition interactions based on approaches spanning from behavioral and lesion to pharmacological and brain imaging and including empirical theoretical and review papers alike Co hosted by the Frontiers in Neuroscience Integrative Neuroscience and Frontiers in Psychology Emotion Science the

contributions comprising our book and the associated research topic are grouped around the following seven main themes distributed across the two hosting journals I Emotion and Selectivity in Attention and Memory II The Impact of Emotional Distraction Linking Enhancing and Impairing Effects of Emotion III What Really is the Role of the Amygdala IV Age Differences in Emotion Processing The Role of Emotional Valence V Affective Face Processing Social Cognition and Personality Neuroscience VI Stress Mood Emotion and the Prefrontal Cortex The Role of Control in the Stress Response VII Emotion Cognition Interactions in Clinical Conditions As illustrated by the present collection of contributions emotion cognition interactions can be identified at different levels of processing from perception and attention to long term memory decision making processes and social cognition and behavior Notably these effects are subject to individual differences that may affect the way we perceive experience and remember emotional experiences or cope with emotionally challenging situations Moreover these opposing effects tend to co occur in affective disorders such as depression and PTSD where uncontrolled recollection of and rumination on distressing memories also lead to impaired cognition due to emotional distraction Understanding the nature and neural mechanisms of these effects is critical as their exacerbation and co occurrence in clinical conditions lead to devastating effects and debilitation Hence bringing together such diverse contributions has allowed not only an integrative understanding of the current extant evidence but also identification of emerging directions and concrete venues for future investigations

Monthly Catalog of United States Government Publications ,1994 Reward- and aversion-related processing in the brain: translational evidence for separate and shared circuits Dave J. Hayes,Georg Northoff,Andrew J. Greenshaw,2016-05-18 Affective brain circuits underpin our moods and emotions Appetitive and aversive stimuli from our exteroceptive and interoceptive worlds play a key role in the activity of these circuits but we still do not know precisely how to characterize these so called reward related and aversion related systems Moreover we do we yet understand how they interact anatomically or functionally The aim of the current project was to gather some translational evidence to help clarify the role of such circuits A multi dimensional problem in its own right the book contains 14 works from authors exploring these questions at many levels from the cellular to the cognitive behavioural and from both experimental and conceptual viewpoints The editorial which introduces the book provides brief summaries of each perspective Hayes Northoff Greenshaw 2015 While questions of how to accurately define affect and emotion related concepts at the psychological level are far from answered here we have attempted to provide some insight into the brain based underpinnings of such processes The near future will undoubtedly involve making new inroads and will require the joint efforts of behavioural brain based and philosophical perspectives to do so **Automotive Retailer** ,1956
