Design and Operating Guide for Aquaculture Seawater Systems John E. Huguenin, John Colt, 1989 The primary objective of this book is to provide basic information and considerations needed for the design construction and operation of seawater systems for culturing purposes The seawater flow rate range of 10 1000 gallons approximately 40 4000 liters per minute has been chosen because it includes the vast majority of such systems currently in use While the objectives of these systems vary widely they all depend on a common technological and biological data base Since the seawater system is usually only a means to an end most potential users have little prior practical experience or technical knowledge in this area Practical information on seawater systems for culturing purposes tends to be fragmented and not readily available in usable form Most conventional engineering experience is with marine systems which are orders of magnitude larger This technology is often not readily scaled down or directly useable and more than likely prohibitively expensive The subject of this book crosses many different disciplines interests and backgrounds This can cause considerable confusion with definitions and units of measure

Manual For Streets, 2007-03-28 Manual for Streets is expected to be used predominantly for the design construction adoption and maintenance of new residential streets but applicable to existing residential streets subject to re design Transformation in the quality of streets requires a fundamental culture change in the way streets are designed This needs a more collaborative approach between design professions and other stakeholders with people thinking creatively about their various roles in the design process This publication is therefore aimed at all those who have a part to play in creating high quality streets
