Management Control Systems Donald G. Malcolm, Alan J. Rowe, 1960 **Management Control Systems** Kenneth A. Merchant, Wim A. Van der Stede, 2003

Management control systems (MCS) is a complex and multidimensional subject which is comprehensively and clearly addressed by this new book. It assumes a basic level of knowledge of management accounting but it is suitable for upper level undergraduates who have taken a prior management accounting course as well as for postgraduates and practising professionals. Features and benefits: Combination of an extensive set of case studies, text and real life examples creates a balanced picture of the concepts, theories and issues surrounding the subject and equips students with the requisite skills to apply them to specific decision making situations that managers face. Case study selection includes many Harvard Business School cases as well as a range of original cases covering businesses in Europe, the USA and beyond. Coverage of the latest management control related tools and techniques such as EVA and Balanced Scorecard. Inclusion of findings of empirical research on the effectiveness of MCS design within different organizational settings provides a solid foundation to the subject. Greater emphasis on management control in the context of strategy and planning offers students the opportunity to develop their analytical skills in this area. Focus on the use and effects of financial results controls which dominate at managerial levels in all but the smallest organizations. It also provides a broad treatment of alternative management controls that puts the financially oriented controls into the proper perspective. The authors: Professor Kenneth A. Merchant is the current holder of the Deloitte Touche LLP Chair of Accountancy at the University of Southern California. He is an experienced teacher, consultant and the author of seven books. Management Control Theory A.J. Berry, J. Broadbent, D.T. Otley, 2019-05-23 First published in 1998, this volume of readings provides an overview of the development of the study of Management Control theory over the past 35 years. The period encompasses the publication of a major and seminal text by Anthony and Dearden in 1965 which acted as a touchstone in defining the range and scope of management control systems. This laid management control's foundations in accounting based mechanisms of control, an element which has been seen as both a strength and a constraint. A good deal of work has followed, providing both a development of the

tradition as well as a critique In this volume we attempt to provide a range of readings which will illustrate the variety of possibilities that are available to researchers scholars and practitioners in the area The readings illustrate the view that sees control as goal directed and integrative They go on to explore the idea of control as adaption consider its relationship with social structure and survey the effects of the interplay between the organisation and the environment The essays included are not intended to lead the reader through a well ordered argument which concludes with a well reasoned view of how management control should be Instead it seeks to illustrate the many questions which have been posed but not answered and to open up agendas for future research
