Process Based Unification for Multi-model Software Process Improvement Z.D.

Kelemen, 2013-01-30 Many different quality approaches are available in the software industry Some of the approaches such as ISO 9001 are not software specific i.e. they define general requirements for an organization and they can be used at any company Others such as Automotive SPICE have been derived from a software specific approach and can be used for improving specific in this case automotive processes Some are created to improve development processes e.g. CMMI for Development others focus on services e.g. CMMI for Services and again others are related to particular processes such as software testing e.g. TMMi or resource management e.g. People CMM A number of differences among quality approaches exist and there can be various situations in which the usage of multiple approaches is required e.g. to strengthen a particular process with multiple quality approaches or to reach certification of the compliance to a number of standards First of all it has to be decided which approaches have potential for the organization In many cases one approach does not contain enough information for process implementation Consequently the organization may need to use several approaches and the decision has to be made how the chosen approaches can be used simultaneously This area is called Multi model Software Process Improvement MSPI The simultaneous usage of multiple quality approaches is called the multi model problem In this dissertation we propose a solution for the multi model problem which we call the Process Based Unification PBU framework The PBU framework consists of the PBU concept a PBU process and the PBU result We call PBU concept the mapping of quality approaches to a unified process The PBU concept is operationalized by a PBU process The PBU result includes the resulting unified process and the mapping of quality approaches to the unified process Accordingly we addressed the

following research question Does the PBU framework provide a solution

Los Baños: A Practical Guide For Newcomers , David Korpas, 2014-05-13 Development in a majority of medicine branches today is based on technological advancement This is the case in cardiology where medical devices designed to correct heart rhythm pacemakers cardioverters defibrillators and biventricular systems are implanted in order to help a sick heart Medical pacing devices today are only developed and produced globally by a several producers who make different technical solutions algorithms system parameters etc The book **Implantable Cardiac Devices Technology** is targeted at biomedical clinical engineers technicians in practice students of biomedical disciplines and all medical staff who are required to understand the basics of pacing technology The book is comprised of fourteen chapters that are further subdivided according to specific topics Chapters dealing with basic heart anatomy physiology and arrhythmology are included for the sake of comprehensiveness Chapters avoid the description of special functions but cover general procedures and parameters common for the systems of all producers The book is intended to serve as a monothematic textbook In order to make the text comprehensible and well arranged for a reader references to professional literature are only provided once in a respective chapter
