

Mendelian Genetics Worksheet

Names: _____

Directions: In your groups of 2, complete the worksheet below. Each question should be answered by a different partner (i.e. you should not answer multiple questions in a row). Initial by the questions you complete.

1. A male and female bird have 4 unhatched eggs. The female is on the left heterozygous; the male on the right is homozygous recessive. Use B or b for your genotypes.

- a. Write the genotype of the female (left) below:

Bb

- b. Write the genotype of the male (right) below:

bb

- c. Which color is dominant, gray or black? How do you know?

The dominant color is **gray** since the female is the gray and the heterozygous one (Bb).

- d. Write the phenotype of the female and the phenotype of the male below:

(female) = **gray** (male) = **black**

- e. Complete the Punnett Square below for this couple:

	B	b
b	Bb	bb
b	Bb	bb

- f. If they follow the Punnett Square ratios, what will the babies in the eggs look like when they hatch?

There is a 50% probability that the babies will look like gray and there is also a 50% probability that the babies will look like black.

- g. Will all four offspring adhere exactly to the ratios predicted by the Punnett Square? Explain:

No, since we cannot foretell something to come out exactly from the result of the ratio.

The Punnett square is only for prediction, it is not 100% sure guaranteed that the answer from our solution will become the exact outcome.

Hint: if I flip a coin and get heads 5 times in a row, what is the likelihood that I will get heads on the next flip?

Kojima,2012-12-06 A basic method of analyzing particulate gene systems is the probabilistic and statistical analyses Mendel himself could not escape from an application of elementary probability analysis although he might have been unaware of this fact Even Galtonian geneticists in the late 1800 s and the early 1900 s pursued problems of heredity by means of mathematics and mathematical statistics They failed to find the principles of heredity but succeeded to establish an interdisciplinary area between mathematics and biology which we call now Biometrics Biometry or Applied Statistics A monumental work in the field of population genetics was published by the late R A Fisher who analyzed the correlation among relatives based on Mendelian gene theory 1918 This theoretical analysis overcame so called blending inheritance theory and the orientation of Galtonian explanations for correlations among relatives for quantitative traits rapidly changed We must not forget the experimental works of Johanson 1909 and Nilsson Ehle 1909 which supported Mendelian gene theory However a large scale experiment for a test of segregation and linkage of Mendelian genes affecting quantitative traits was probably for the first time conducted by K Mather and his associates and Panse in the 1940 s
