

EXERCISE 11 – MENDELIAN GENETICS PROBLEMS

These problems are divided into subdivisions composed of problems that require application of a specific genetic principle. These problems are intended to complement the lecture portion of this course; specifically, the material described in lecture is to be applied to solve these problems. The answers are provided in Appendix A. You are strongly advised against consulting this appendix before you have made a serious attempt to answer a problem.

A. Monohybrid Crosses

1. In *Colerus*, some plants have shallowly crenated edges and others have deeply incised leaves. A cross is made between homozygous deep and shallow individuals. The shallow trait is dominant.
 - a. Using S and s to symbolize the genes for this trait, give the phenotypic and genotypic ratios for the F_1 generation.
 - b. If self pollination is allowed, what is the phenotypic ratio for the F_2 generation?
2.
 - a. In a pea plant that breeds true for tall, what possible gametes can be produced? Use the symbol D for tall, d for dwarf.
 - b. In a pea plant that breeds true for dwarf, what possible gametes will be produced?
 - c. What will be the genotype of F_1 offspring from a cross between these two types?
 - d. Assuming that the allele for tall is dominant, what will be the phenotype of F_1 offspring from a cross between these two types?
 - e. What will be the probable distribution of traits in the F_2 generation? (Illustrate with a Punnett square).
3. The ability to taste a bitter chemical, phenylthiocarbamide (PTC), is due to a dominant gene. Use T and t to symbolize the two alleles of this gene.
 - a. What is the genotype of a nontaster? What are the possible genotypes of a taster?
 - b. Could a person with two tasters as parents be a non-taster? How?
4. A woman heterozygous for polydactyly (extra fingers and toes), a dominant trait, is married to a normal man. What is the probability of producing an offspring that has extra fingers or toes?
5. Parents who do not have Tay Sachs disease produce a child who has this terrible affliction. What are the chances that each child born of this union will be affected?
6. In human beings, ability to curl the tongue into a U-shaped trough is a heritable trait. "Curlers" always have at least one curler parent, but "noncurlers" may occur in families where one or both parents are curlers. Using C and c to symbolize this trait, what is the genotype of a noncurler?

Analysis of Variance, Design, and Regression Ronald Christensen, 1996-06-01 This text presents a comprehensive treatment of basic statistical methods and their applications It focuses on the analysis of variance and regression but also addressing basic ideas in experimental design and count data The book has four connecting themes similarity of inferential procedures balanced one way analysis of variance comparison of models and checking assumptions Most inferential procedures are based on identifying a scalar parameter of interest estimating that parameter obtaining the standard error of the estimate and identifying the appropriate reference distribution Given these items the inferential procedures are identical for various parameters Balanced one way analysis of variance has a simple intuitive interpretation in terms of comparing the sample variance of the group means with the mean of the sample variance for each group All balanced analysis of variance problems are considered in terms of computing sample variances for various group means Comparing different models provides a structure for examining both balanced and unbalanced analysis of variance problems and regression problems Checking assumptions is presented as a crucial part of every statistical analysis Examples using real data from a wide variety of fields are used to motivate theory Christensen consistently examines residual plots and presents alternative analyses using different transformation and case deletions Detailed examination of interactions three factor analysis of variance and a split plot design with four factors are included The numerous exercises emphasize analysis of real data Senior undergraduate and graduate students in statistics and graduate students in other disciplines using analysis of variance design of experiments or regression analysis will find this book useful

Elliott Sober, 2024-02-08 Natural selection mutation and adaptation are well known and central topics in Darwin's theory of evolution and in the 20th and 21st century theories which grew out of it but many other important topics are used in evolutionary biology that raise interesting philosophical questions In this book Elliott Sober analyses a much larger range of topics including fitness altruism common ancestry chance taxonomy phylogenetic inference operationalism reductionism conventionalism null hypotheses and default reasoning instrumentalism versus realism hypothetico deductivism essentialism falsifiability the principle of parsimony the principle of the common cause causality determinism versus indeterminism sensitivity to initial conditions and the knowability of the past Sober's clear philosophical analyses of these key concepts arguments and methods of inference will be valuable for all readers who want to understand evolutionary biology in both its Darwinian and its contemporary forms NEET UG Biology Study Notes (Volume-2) with Theory + Practice MCQs for Complete Preparation - Based on New Syllabus as per NMC | Includes A&R and Statement Type Questions EduGorilla Prep Experts,
