

Microsoft Access Exercises for BTT

We will now be looking at the database portion of Microsoft Office 2000. Access is a DBMS which stands for Database Management System. You can use Access to store and manage large collections of information. As you go through this booklet, follow the instructions very carefully and answer the questions on your master handout.

GETTING STARTED

- Load Microsoft Access.(desktools – Microsoft Office – Access)
- Select Blank Access database. Click ok.
- Notice the default filename in Access. When you save a file, the file extension .accdb will automatically be added to the end of the filename to indicate that it is an Access file.
- Type **payroll** for filename. Open the folder and find your BTT/Databases folder. Save in here. Click Create.
- This file is the Database file.
- When you open or create a database file, you see the Table window, which is one of the objects you can create in Access. Click on the Create Tab and you will see the objects we can create in Access. There are Tables, Forms, Reports and Queries.
- These Objects will have their own title or name and will be stored in the Database file.
- Answer questions 1 to 3 on your master handout.

THE SETUP OF A DATABASE

To illustrate the following terms, an example using Ontario phone directories will be used.

- | | |
|---|--|
| • A <i>database</i> is a collection of related files. | (ie. all telephone directories in Ontario) |
| • A <i>file</i> is a collection of related records. | (ie. one of the phone directories) |
| • A <i>record</i> is a collection of related fields. | (ie. one persons Name, Address, Phone#) |
| • A <i>field</i> is a specific category of information. | (ie. all the Names or Phone#’s) |
| • Answer question 4 on your master handout. | |

CREATING A TABLE

- Tables allow you to enter field names and data. The table will then store this information. You can have one or more tables in a database.

Create a Table by Entering Data

- Your Database should already be open on a new table, if not go to the Create TAB and select Table.
- This is called Datasheet view for the table. Notice that the screen looks a lot like a spreadsheet, but instead of letters there are Field Names for headings.
- If it asks you to save or name the table, type in PayrollTable.
- Before you create a database, you must decide which fields you want to include in each table. Consider what information the database will store and how the information will be used. Check each field to see whether it should be split into additional fields based on how you need to sort, calculate, or find information.
