Walk in the shoes of elementary school teachers as they engage in the 200 micro-decisions per minute needed to balance the strategies, tasks, and assessments seminal to high-impact mathematics instruction. Using grade-level examples and a decision-making matrix, you'll learn to articulate clear learning intentions and success criteria at surface, deep, and transfer levels. Employ evidence to guide students along the path of becoming metacognitive and self-directed mathematics achievers. Use formative assessments to track what students understand, what they don't, and why. Select the right task for the conceptual, procedural, or application emphasis you want, ensuring the task is for the right phase of learning. Adjust the difficulty and complexity of any task to meet the needs of all learners. It's not only what works, but when. Exemplary lessons, video clips, and online resources help you leverage the most effective teaching practices at the most effective time to meet the surface, deep, and transfer learning needs of every student. *Eureka Math Grade 6 Study Guide*

Teaching Mathematics at a Technical College Zachary Youmans, 2022-11-25 Not much has been written about technical colleges especially teaching mathematics at one Much had been written about community college mathematics This book addresses this disparity Mathematics is a beautiful subject worthy to be taught at the technical college level The author sheds light on technical colleges and their importance in the higher education system Technical colleges area more affordable for students and provide many career opportunities These careers are becoming or have become as lucrative as careers requiring a four year degree The interest in technical college education is likely to continue to grow Mathematics like all other classes is a subject that needs time energy and dedication to learn For an instructor it takes many years of hard work and dedication just to be able to teach the subject Students should not be expected to learn the mathematics overnight As instructors we need to be open honest and put forth our very best to our students so that they can see that they are able to succeed in whatever is placed in front of them This book hopes to encourage such an effort A notable percentage of students who are receiving associate degrees will go through at least one of more mathematics courses These students should not be forgotten about their needs are similar to any student who is required to take a mathematics course to earn a degree This book offers insight into teaching mathematics at a technical college It is also a source for students to turn toward when they are feeling dread in taking a mathematics course Mathematics instructors want to help students succeed If they put forth their best effort and us ours we can all work as one team to get the student through the course and onto chasing their dreams Though this book focuses on teaching mathematics some chapters expand to focus on teaching in general The overall hope is the reader will be inspired by the great work that is happening at technical colleges all around the country Technical college can be should be and is the backbone of the American working class
