Deconstructing Dinosaurs Marco Tamborini, Michael Ohl, Musa Sadock, Bertram Mapunda, Halfan Magani, Mareike  
Vennen, 2024-12-02 Deconstructing Dinosaurs takes a fresh look at the history of the German Tendaguru Expedition 1909  
1913 using recently uncovered sources to reveal how Berlin's Natural History Museum appropriated and extracted 225  
tonnes of dinosaur fossils from land belonging to modern day Tanzania It examines the colonial conditions under which the  
area's inhabitants located excavated and prepared the finds and carried them out of the country's interior to the coast Once  
in Berlin the fossils were transformed into valuable scientific assets and prize exhibits foremost among them Giraffatitan  
brancai This specimen a prominent subject of provenance and restitution debates is used to explore the colonial legacy of

*Ecology and Biogeography of High Altitude Insects* M.S. Mani, 2013-03-14 In my book Introduction to High Altitude  
Entomology published in 1962 I summarized the results of eight years studies mainly on the Himalaya I have since then had  
the opportunity of studying the collections of high altitude insects from the Alps Carpathians Caucasus Urals Alai Pamirs Tien  
Shan Altai and other important mountains of the world in different museums and institutions in Europe Through the  
courtesy and generosity of the Academy of Sciences of the Union of Soviet Socialist Republics I was also able to personally  
collect insects and make valuable field observations on the Caucasus the Alai Pamirs Ala Tau and the Tien Shan mountains  
Through comparative studies I have tried to synthesize the fundamental principles of high altitude entomology I have  
described here the distinctive characters of the high altitude environment the ecological specializations of the high altitude  
insects their ecological inter relations and the outstanding peculiarities of their biogeography I have also presented here an  
outline of the high altitude entomology of the principal mountains of the world with brief accounts of their orogeny geology  
and vegetation This book differs from all other contributions in the field in its comparative ecological approach and in the  
fact that the main emphasis is throughout on the evolution of the high altitude ecosystem as an integral part of the orogeny

High mountains are in all parts of the world important and independent centres of origin and differentiation of distinctive and highly specialized ecosystems and faunas      **Index-catalogue of Medical and Veterinary Zoology ... Authors ...**
