Madame de La Mothe Guyon Thomas Cogswell Upham, 1862 **Active Learning in College Science** Joel J. Mintzes, Emily
 M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary
 education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate
 claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to
 showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models
 of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished
 scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience
 consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and
 technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In
 keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support
 meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an
 Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging
 Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group
 Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI
 Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX
 is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses
 The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students
 who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view
 of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging
 connections between new ideas and those that are part of their existing knowledge base For most students that knowledge
 base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their
 lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas
 differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge
 and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this
 prescription demands far more than most college and university scientists have been prepared for *Mapping the Spectrum*
 Klaus Hentschel, 2002 Ever since the boom of spectrum analysis in the 1860s spectroscopy has become one of the most
 fruitful research technologies in analytic chemistry physics astronomy and other sciences This book is the first in depth study
 of the ways in which various types of spectra especially the sun's Fraunhofer lines have been recorded displayed and
 interpreted The book assesses the virtues and pitfalls of various types of depictions including hand sketches woodcuts

engravings lithographs and from the late 1870s onwards photomechanical reproductions The material of a 19th century engraver or lithographer the daily research practice of a spectroscopist in the laboratory or a student s use of spectrum posters in the classroom all are looked at and documented here For pioneers of photography such as John Herschel or Hermann Wilhelm Vogel the spectrum even served as a prime test object for gauging the color sensitivity of their processes This is a broad contextual portrayal of the visual culture of spectroscopy in the 19th and early 20th centuries The illustrations are not confined to spectra they show instruments laboratories people at work and plates of printing manuals The result is a multifaceted description focusing on the period from Fraunhofer up to the beginning of Bohr s quantum theory A great deal of new and fascinating material from two dozen archives has been included A must for anyone interested in the history of modern science or in research practice using visual representations American Journal of Physics ,1991 Solar Energy Update ,1981 *The Chautauquan* ,1906 *The Nation* ,1890 **Knowledge** ,1901 **Science without Leisure** Harun Küçük,2019-12-13 Science in seventeenth and eighteenth century Istanbul Harun K k argues was without leisure a phenomenon spurred by the hyperinflation a century earlier when scientific texts all but disappeared from the college curriculum and inflation reduced the wages of professors to one tenth of what they were in the sixteenth century It was during this tumultuous period that philosophy and theory the more leisurely aspects of naturalism and the pursuit of knowledge for knowledge s sake vanished altogether from the city But rather than put an end to science in Istanbul this economic crisis was transformative turning science into a practical matter into something one learned through apprenticeship and provided as a service In *Science without Leisure* K k reveals how Ottoman science when measured against familiar narratives of the Scientific Revolution was remarkably far less scholastic and philosophical and far more cosmopolitan and practical His book explains why as practical naturalists deployed natural knowledge to lucrative ends without regard for scientific theories science in the Ottoman Empire over the long term ultimately became the domain of physicians bureaucrats and engineers rather than of scholars and philosophers **Books and Pamphlets, Including Serials and Contributions to Periodicals** Library of Congress.
