

# Experimental Procedure: Synthesis of Aspirin

- We measured out 2.0 grams of solid salicylic acid into a 50 mL Erlenmeyer Flask.
- We then added 5.0 mL of acetic acid and 5 drops of 85% phosphoric acid to the salicylic acid.
- The mixture was swirled, using a small amount of distilled water to rinse down any material sticking to the inner walls of the flask.
- The phosphoric acid and acetic anhydride was handled VERY carefully because both can cause skin burns.

*Laboratory Manual for Principles of General Chemistry* J. A. Beran, Mark Lassiter, 2022-08-16 *Laboratory Manual for Principles of General Chemistry* 11th Edition covers two semesters of a general chemistry laboratory program. The material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and depend on identifying an appropriate experimental procedure, selecting the proper apparatus, employing the proper techniques, systematically analyzing and interpreting the data, and minimizing inherent variables. As a result of good data, a scientific and analytical conclusion is made, which may or may not be right but is certainly consistent with the data. Experiments write textbooks; textbooks don't write experiments. A student's scientific literacy grows when experiences and observations associated with the scientific method are encountered. Further experimentation provides additional cause-effect observations leading to an even better understanding of the experiment. The 11th edition's experiments are informative and challenging while offering a solid foundation for technique, safety, and experimental procedure. The reporting and analysis of the data and the pre and post lab questions focus on the intuitiveness of the experiment. The experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit. An Additional Notes column is included in each experiment's Report Sheet to provide a space for recording observations and data during the experiment. Continued emphasis on handling data is supported by the Data Analysis section.

*Reading and Understanding Research* Lawrence F. Locke, Stephen J. Silverman, Waneen Wyrick Spirduso, 2004-03-03 This edition contains new material on the twelve steps for doing different types of research studies, a new chapter on the utilization of research, and expanded coverage of qualitative research topics. The authors presume no special background in research and begin by introducing and framing the notion of reading research within a wider social context. Next, they offer insight on when to seek out research, locating and selecting the right reports, and how to help evaluate research for trustworthiness. A step-by-step reading of reports from qualitative and quantitative studies follows, and the final chapters examine in greater detail the different types of research to be encountered and how to examine the research more critically.

Hemostasis and Stroke Zsuzsa Bagoly, Daniel Behme, Johannes Kaesmacher, Sara Martinez De Lizarrondo, 2021-09-30 *Laboratory Manual for Principles of General Chemistry* Jo Allan Beran, 2010-11-01 This new edition of the Beran lab manual emphasizes chemical principles as well as techniques. The manual helps students understand the timing and situations for the various techniques. The Beran lab manual has long been a market-leading lab manual for general chemistry. Each experiment is presented with concise objectives, a comprehensive list of techniques, and detailed lab intros and step-by-step procedures.
