## **Experimental Stress Analysis Examination Question Paper:**

**Experimental Stress Analysis** H. Wieringa, 2012-12-06 Designing and manufacturing structures of all kinds in an economic and a safe way is not possible without doing experimental stress analysis. The modernity of structures with their higher reliability demands as well as today's more stringent safety rules and extreme environmental conditions necessitate the improvement of the measuring technique and the introduction of new ones. Although theoretical mathematical analysis is improving enormously, an example of which is the finite element model, it cannot replace experimental analysis and vice versa. Moreover, the mathematical analysis needs more and more accurate parameter data which in turn need improved experimental investigations. No one can do all those investigations on his own. Exchange of knowledge and experience in experimental stress analysis is a necessity, a thing acknowledged by every research worker. Therefore, the objective of the Permanent Committee for Stress Analysis (PC SA) is to promote the organization of conferences with the purpose of disseminating new research and new measuring techniques as well as improvements in existing techniques and furthermore to promote the exchange of experiences of practical applications with techniques. This VIIIth International Conference on Experimental Stress Analysis on behalf of the PC SA is one in a series which started in 1959 at Delft NL and was followed by conferences at Paris F, Berlin W, Cambridge K, Udine I, Munich FRG and Haifa Isr. Such a Conference will be held in Europe every fourth year half way between the IUTAM Congresses. **Experimental Stress Analysis Society for Experimental Stress Analysis**, 1963 Vol 1 no 1 contains Proceedings of the 17th or the last Eastern Photoelasticity Conference.
