

Similar Triangles?

Determine whether the triangles are similar. If so, write a similarity statement. Explain your reasoning.

By the Reflexive Property, $\angle M \cong \angle M$.

$$\frac{MP}{MS} = \frac{12}{12 + 18} = \frac{12}{30} \text{ or } \frac{2}{5} \text{ and } \frac{MN}{MR} = \frac{10}{10 + 15} = \frac{10}{25} \text{ or } \frac{2}{5}.$$

$\triangle MNP \sim \triangle MRS$ by the SAS Similarity Theorem.

Text Data Management and Analysis ChengXiang Zhai, Sean Massung, 2016-06-30 Recent years have seen a dramatic growth of natural language text data including web pages news articles scientific literature emails enterprise documents and social media such as blog articles forum posts product reviews and tweets This has led to an increasing demand for powerful software tools to help people analyze and manage vast amounts of text data effectively and efficiently Unlike data generated by a computer system or sensors text data are usually generated directly by humans and are accompanied by semantically rich content As such text data are especially valuable for discovering knowledge about human opinions and preferences in addition to many other kinds of knowledge that we encode in text In contrast to structured data which conform to well defined schemas thus are relatively easy for computers to handle text has less explicit structure requiring computer processing toward understanding of the content encoded in text The current technology of natural language processing has not yet reached a point to enable a computer to precisely understand natural language text but a wide range of statistical and heuristic approaches to analysis and management of text data have been developed over the past few decades They are usually very robust and can be applied to analyze and manage text data in any natural language and about any topic This book provides a systematic introduction to all these approaches with an emphasis on covering the most useful knowledge and skills required to build a variety of practically useful text information systems The focus is on text mining applications that can help users analyze patterns in text data to extract and reveal useful knowledge Information retrieval systems including search engines and recommender systems are also covered as supporting technology for text mining applications The book covers the major concepts techniques and ideas in text data mining and information retrieval from a practical viewpoint and includes many hands on exercises designed with a companion software toolkit i e MeTA to help readers learn how to apply techniques of text mining and information retrieval to real world text data and how to experiment with and improve some of the algorithms for interesting application tasks The book can be used as a textbook for a computer science undergraduate course or a reference book for practitioners working on relevant problems in

analyzing and managing text data The Normative and the Evaluative Rach Cosker-Rowland,2019-01-31 Many have been attracted to the idea that for something to be good there just have to be reasons to favour it This view has come to be known as the buck passing account of value According to this account for pleasure to be good there need to be reasons for us to desire and pursue it Likewise for liberty and equality to be values there have to be reasons for us to promote and preserve them Extensive discussion has focussed on some of the problems that the buck passing account faces such as the wrong kind of reason problem Less attention however has been paid as to why we should accept the buck passing account or what the theoretical pay offs and other implications of accepting it are The Normative and the Evaluative provides the first comprehensive motivation and defence of the buck passing account of value Rach Cosker Rowland argues that the buck passing account explains several important features of the relationship between reasons and value as well as the relationship between the different varieties of value in a way that its competitors do not She shows that alternatives to the buck passing account are inconsistent with important views in normative ethics uninformative and at odds with the way in which we should see practical and epistemic normativity as related In addition she extends the buck passing account to provide an account of moral properties as well as all other normative and deontic properties and concepts such as fittingness and ought in terms of reasons *Fuzzy Databases* Frederick E. Petry,2012-12-06 This volume presents the results of approximately 15 years of work from researchers around the world on the use of fuzzy set theory to represent imprecision in databases The maturity of the research in the discipline and the recent developments in commercial industrial fuzzy databases provided an opportunity to produce this survey In this introduction we will describe briefly how fuzzy databases fit into the overall design of database systems and then overview the organization of the text FUZZY DATABASE LANDSCAPE The last five years have been witness to a revolution in the database research community The dominant data models have changed and the consensus on what constitutes worthwhile research is in flux Also at this time it is possible to gain a perspective on what has been accomplished in the area of fuzzy databases Therefore now is an opportune time to take stock of the past and establish a framework A framework should assist in evaluating future research through a better understanding of the different aspects of imprecision that a database can model 1 l **Introduction to Objectivist Epistemology** Ayn Rand,1990-04-26 Today man s mind is under attack by all the leading schools of philosophy We are told that we cannot trust our senses that logic is arbitrary that concepts have no basis in reality Ayn Rand opposes that torrent of nihilism and she provides the alternative in this eloquent presentation of the essential nature and power of man s conceptual faculty She offers a startlingly original solution to the problem that brought about the collapse of modern philosophy the problem of universals This brilliantly argued superbly written work together with an essay by philosophy professor Leonard Peikoff is vital reading for all those who seek to discover that human beings can and should live by the guidance of reason **Explaining Science's Success** John Wright,2014-09-11 Paul Feyerabend famously asked what s so great about science One answer is that it has been

surprisingly successful in getting things right about the natural world more successful than non scientific or pre scientific systems religion or philosophy Science has been able to formulate theories that have successfully predicted novel observations It has produced theories about parts of reality that were not observable or accessible at the time those theories were first advanced but the claims about those inaccessible areas have since turned out to be true And science has on occasion advanced on more or less a priori grounds theories that subsequently turned out to be highly empirically successful In this book the philosopher of science John Wright delves deep into science s methodology to offer an explanation for this remarkable success story
