Internet Intermediaries and Trade Mark Rights Althaf Marsoof,2019-06-05 Despite the apparent advantages of the internet there is little debate that it facilitates intellectual property infringements including infringements of trade mark rights Infringers not only remain hidden by the anonymity the internet provides but also take advantage of its increasing reach and the associated challenges with regard to cross border enforcement of rights These factors among others have rendered the internet a growing source of counterfeit and other infringing products It has therefore become necessary for right holders to shift their focus from individual infringers to internet intermediaries such as Internet Service Providers ISPs hosts and navigation providers which are responsible in numerous ways for making content promoting infringements available to internet users In light of these developments this book conducts a comprehensive analysis of the liability of such intermediaries for trade mark infringements and considers the associated issues and challenges in the diverging approaches under which liability may be imposed At present however neither UK trade mark law nor English common law principles relating to accessorial liability provide a basis to hold internet intermediaries liable for trade mark infringements As such this book considers approaches adopted in some of the Continental European countries and the US in order to propose reforms aimed at addressing gaps in the existing legal framework This book also examines alternative remedies such as notice and takedown and injunctions and discusses the associated shortcomings of each of these remedies Solaris 10 System Administration Exam Prep Bill Calkins,2009-05-06 Solaris 10 System Administration Part II Exam CX 310 202 Bill Calkins In this book you ll learn Advanced Topics in Solaris 10 System Administration for SPARC and x86 based systems including Administering the network environment in Solaris 10 Setting up RAID metadevices using SVM Configuring ZFS storage pools and file systems Configuring and administering Solaris zones and containers Administering virtual file systems and swap
