It details the significant planning one must first do including choosing a suitable experienced clinician as a supervisor, sourcing for a winning idea with significant clinical impact, performing a proper review of literature, defining clearly the objectives to be set and adopting the appropriate methodology. Statistical evaluation must be done from the start of the research to define adequate sample size and also for evaluation of the results. It also advises how one should draw upon relevant and appropriate conclusions from the results obtained. The ethics of research is also discussed. An all important factor in research is the procurement of research grants. Readers are guided how to write a proper research proposal to secure these much needed grants.
